IOM Yemen DTM's Rapid Displacement Tracking (RDT) tool collects data on estimated numbers of households forced to flee on a daily basis from their locations of habitual residence or displacement, allowing for regular reporting of new displacements[1] in terms of estimated numbers, causes of displacement, geography and needs. It also tracks returnees who returned to their location of habitual residence.

Between 5 and 11 June 2022, IOM Yemen DTM tracked 144 households (864 individuals)[2] who experienced displacement at least once.

Safety and security concerns as a result of the conflict were the main reason for displacement, accounting for 76 per cent (110 HHs) of the total, followed by economic reasons related to conflict, accounting for 24 per cent (34 HHs).

Between 1 January to to 11 June 2022, IOM Yemen DTM tracked 6,510 households (HH)[3] (39,060 Individuals) who experienced displacement at least once.

Since the beginning of the year, the number of tracked new instances of displacement has been declining steadily.
