The DTM Emergency Event Tracking (EET) is deployed to track sudden displacement and population movements, provide more frequent updates on the scale of displacement, and quantify the affected population when needed. As a subcomponent of the new Mobility Tracking methodology in Sudan (Round Two), and activated on a need basis, EET utilises a broad network of key informants to capture best estimates of the affected population presence per location – a useful tool for humanitarian response planning and design.

**Event Overview**

DTM teams activated EET to monitor the displacement of individuals affected by inter-communal violence in Azoom locality, Central Darfur. Clashes erupted on 6 December when Soya village was attacked by an Arab tribe.

The first EET update estimates a total number of 750 individuals (150 households) currently seeking shelter in Al Salam town. The IDP caseload was originally displaced from Soya village, Azoom locality in Central Darfur.

All displaced individuals are Sudanese nationals. DTM teams identified at least 73 cases of additional vulnerabilities in need of assistance and support. Based on a ranking scale, the three priority needs across the caseload are Non-Food Items, Health (medical needs) and Food.

**Demographics**

- **Male**: 45% 338 individuals
- **Female**: 55% 412 individuals
