

Flow Monitoring: Senegal

Subnational connectivity network map showing incoming flows during the period April 2017 and December 2019

This map illustrates all the outgoing movements from Senegal tracked by the Displacement Tracking Matrix's Flow Monitoring project. The data comprises the period between 1 April 2017 until 31 December 2019, corresponding to 81,926 of individuals transiting through 3 flow monitoring points (yellow dots) from their admin level 1 of origin (red dots). Only geo-referenced data at admin level 1 are displayed.

METHODOLOGY: DTM teams collect information at the local level to identify key transit points. Enumerators collect data from key informants (KIs) at the FMPs. Data is collected through a basic form filled out by enumerators following interviews with KIs and combined with direct observations. Data is collected on a daily basis during peak hours.

LIMITATIONS: Data collected for these exercises should be understood as estimations only. They represent only part of the total population flows passing through the flow monitoring points. The spatial and temporal coverage of this data collection activity is therefore incomplete.
