Starting on 24 February 2022, the war in Ukraine triggered an unprecedented humanitarian crisis across all of the country’s sub-regional divisions (oblasts). Between 17 and 23 August, the International Organization for Migration (IOM) conducted the eighth round of a rapid representative assessment of the general population in Ukraine to gather insights into internal displacement and mobility flows, and to assess local needs. This general population survey serves as a preliminary source to identify areas with high humanitarian needs and to inform the targeting of response aiming to assist the war-affected population. The geographical scope of the assessment covers the entire territory of Ukraine, all five macro-regions (West, East, North, Centre, South), and the city of Kyiv, with the exception of the Crimean peninsula. The general population survey was conducted through a random-digit-dial (RDD) approach, and 2,001 unique and anonymous respondents aged 18 and over were interviewed using the computer-assisted telephone interview (CATI) method. The estimates rely on the UNFPA population data for Ukraine, agreed upon as the common population baseline by the humanitarian community. Those currently outside Ukraine were not interviewed. For further notes on method and limitations, including IOM’s definition of internally displaced persons used for the purpose of this assessment, see page 12. In addition to this General Population Survey, data on recorded IDP presence at hromada level in Ukraine are available from IOM’s Displacement Tracking Matrix – Baseline Assessment (Round 10, 2022, HDX).

Active consider leaving their place of habitual residence due to war (non-displaced population only)

Results of IOM’s general population survey show that, as of 23 August 2022, 16% of the general population, equivalent to over 6.97M individuals, are internally displaced within Ukraine. This represents an increase of almost 330,000 IDPs (5%) since July 23. The increase in IDP stock observed in Round 8 was foreshadowed in Round 7 by an increase in the share of non-displaced population considering to leave their habitual residence due to war.

**Starting in Round 3, IOM made a slight adjustment to the estimation method for IDPs in Ukraine to increase the precision of the sampling frame and improve accuracy, while remaining within the original margin of error.**

**Est. IDPs in Ukraine**

**Est. returnees in Ukraine**

**Est. returnees**

Despite a growth in the IDP estimate, the number of estimated returns has also increased between July 23 and August 23. Further analysis of returns (p.7-8) highlights the return dynamics (plus 2.8 million since round 3) and the potential for further mobility in the coming months.

**Est. internally displaced persons by macro-region**

**International Organization for Migration (IOM)**

The designations employed and the presentation of material throughout the report do not imply expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries.

For data on recorded (registered) IDP presence at hromada level, see IOM’s DTM Baseline Area Assessment for Ukraine (Data available for 20 oblasts and Kyiv city).

The dataset is available for humanitarian partners on HDX for registered users, and upon request from dtmukraine@iom.int.
Ukraine Internal Displacement Report
GENERAL POPULATION SURVEY, ROUND 8, 23 AUGUST 2022

INTERNALLY DISPLACED PERSONS

Where do those currently displaced by war come from?
Data shows a variation in the scope of displacement flows at the macro-region level. As part of the overall 5% increase in the total stock of IDPs in Ukraine between Rounds 7 and 8, the estimated numbers of IDPs originally from the East remains high, and the share of IDPs from the South macro-region has sharply increased (South: +23%). The estimate of IDPs originally from the Centre macro-region has decreased by over 60%. In R8, IDPs from the East now represent 61% of all IDPs in Ukraine (55% in round 5).

Total est. displaced within Ukraine: 6,945,000

IDPs BY MACRO-REGION OF CURRENT LOCATION (comparison by rounds)

Where are those displaced by war currently located?
West and North macro-regions both experienced an increase in numbers of IDPs (+395,000 in the West macro-region and +70,000 in the North). As in R7, the largest decrease in estimated IDP presence is again observed in the Centre (-8%, equivalent to 81,000 estimated IDP departures). The increase in the overall number of IDPs located in the city of Kyiv has decreased slightly for the first time since Round 5 (23 May).

*Note: The options “Refuse” included in the analysis since round 3

When asked to identify their single most pressing need, cash (financial support) is identified by the largest number of IDPs (60% indicate this is their most pressing need), followed by medicine and health services (73%).

IDP COPING STRATEGIES

Among IDP respondents, 94% indicated their households adopted at least one coping strategy in reaction to reduced incomes and increased insecurity. Compared to male IDPs, a larger share of female IDPs reported reducing food and health expenditures in their households, while male IDPs were more likely to have skipped debt payments, taken new loans, accepted lower-paid jobs, or sold means of transport.

INTERNATIONAL ORGANIZATION FOR MIGRATION (IOM)

Note: % numbers reported are rounded for ease of use.

When quoting, paraphrasing or in any way using the information mentioned in this report, the source needs to be stated appropriately as follows: “Source: International Organization for Migration (IOM), Ukraine Internal Displacement Report, Round 8, August 2022.”
INTERNALLY DISPLACED PERSONS

DURATION OF DISPLACEMENT

Average duration of displacement among IDPs in Ukraine following 180 days of war (23 August 2022)

In Round 8 of the survey, IDPs were asked to report the number of days elapsed since their initial displacement. The distribution is heavily skewed towards a longer duration of displacement – over 63% of current IDPs in Ukraine have been displaced for three months or longer.

There are no significant differences between the length of displacement among IDPs in different macro-regions of Ukraine, as the regional averages closely resemble the national average length of IDP displacement. The Kyiv macro-region is the only exception in this regard, with IDPs in Kyiv living in displacement for an average of 110 days.

FURTHER MOBILITY INTENTIONS

Following two months of decrease in the overall readiness for further mobility among IDPs in Ukraine, once again, a larger share (29%, compared to 26% in July) of IDPs are weighing the possibility of leaving their current location. Among those Ukrainians who remain in their habitual places of residence, the share of people considering relocating remains relatively small and stable (4%).

Between IDPs in the North, 38% intend to move further (any direction, including possible return), as do 37% of IDPs in the West macro-region, 29% of IDPs in the South, and 23% in the East. 20% of IDPs in Centre and 15% of IDPs in the Kyiv macro-region now indicate an intention of further movement.

LONG TERM INTENTIONS

In Round 8, once again, IOM inquired about envisioned long-term durable solutions among those IDPs who do not plan to return to their places of habitual residence in the immediate future. Since July 23rd, a growing share of IDPs report return as their preferred durable solution. That said, a considerable proportion (10% nation-wide) wish to integrate in their current location. This is most common among IDPs in the Kyiv macro-region, among whom 30% wish to integrate locally. In the North, 19% of IDPs wish to integrate locally, while in other macro-regions the share is lower – only 8% of IDPs in the West macro-region wish to stay, for example. The West, however, also hosts the largest share of IDPs who do not yet know what their long-term intentions are – 10.5%. Only a small proportion of IDPs in Ukraine now plan to resettle in a third location for the long term. Naturally, long-term intentions are linked to the IDP’s place of origin. Displaced persons from the Eastern macro-region more often report having an intention to integrate into the current or another host community (16%), whereas those who were displaced from the city of Kyiv more often than others indicate they plan to return home (89% respectively).

IDP SHORT-TERM VISITS AT HOME

Over a third of internally displaced respondents had visited their home since the start of the war. These visits are not considered as returns.

A significant proportion of IDPs have journeyed to visit or check up on their homes for a short-time while living in displacement. This is most common for IDPs originally from the Kyiv and North Macro-regions, with 64% and 65% respectively confirm having made such visits. The visits are far less common among IDPs originally from the South (20%) and East (30%). On average, IDPs made three such visits since the start of the war, though the distribution is skewed towards fewer visits - among those who visited, 38% only visited once.

There may be some correlation between IDPs’ home visits and their readiness to return within the forthcoming two weeks, though the possible connection is only indicative due to sample size.
INTERNALLY DISPLACED PERSONS

Among IDPs who were employed before the war, 60% lost their jobs since their displacement (since February 2022). During the past 6 months, almost half (48%) of all displaced attempted to find employment after leaving their place of residence due to the war. However, among those, 45% continued to be unemployed and are actively looking for a job. The most frequently used channels for job search were the Internet (81%), mobile apps for job search (23%), relatives/friends/acquaintances (17%), the State Employment Service (13%), and visual informational materials (posters, message boards) (6%).

IDP INCOME SOURCE AND LIVELIHOOD

IDPs’ income sources have been severely impacted by the war. Nearly half of the IDPs aged 18-64 (44%) indicated that they are not earning any money now. IDPs were also asked to name their primary individual income source following displacement from their habitual place of residence. Only 33% of the respondents indicated salary as their primary source of income following displacement, while 24% mentioned IDPs’ monthly financial assistance.

Women (29%) relied more often than men (10%) on monthly assistance for IDPs. The opposite was true of salaries: half of male IDP respondents (50%) and a quarter of female IDP respondents named salary as their primary income source. Secondary sources of income over the last 30 days included: monthly support for IDPs (34%), salary (13%), and social benefits (12%).

IDP CURRENT EMPLOYMENT

IDP respondents aged 18-64 were asked about their employment status over the past week to identify their current economic activity. Only 31% of those surveyed reported they were involved in paid work. Thirty-eight percent were unemployed, of whom 27% were actively looking for work, and 11% were not searching for employment. The highest shares of unemployed were in the South macro-region and the city of Kyiv.

The most frequently mentioned pre-displacement employment sectors of those currently unemployed were trade and services (30%).

Nearly one-fifth (19%) of displaced interviewees had accepted to work in a lower-paid job, while others (17%) had agreed to work in a lower-skilled job. Male IDPs were most likely to mention labor market coping strategies usage, including accepting a low-paid (24%) or lower-qualified job (23%).

EMPLOYABILITY ATTITUDES

Those displaced not planning to return to their habitual place of residence for the next two weeks were asked about their work preference in the location of displacement. Almost half said they prefer to work for an employer (as an employee) and 25% reported they would like to start their own business.

Among those who reported that they would prefer to start their own business in the place of relocation, 17% planned to do so in the next three months. An additional 6% said the opportunity to start a business in the next quarter depends on the situation. Meanwhile, among IDPs preferring to be employees, 47% considered changing their profession or learning new skills to adapt to local labor market demands.

Main source of personal income after displacement (IDPs aged 18-64)

- **Salary (incl. private entrepreneurship profit)**: 33%
- **IDPs monthly support (incl. assistance from international and non-governmental organizations)**: 24%
- **Social benefits**: 10%
- **Retirement pension**: 11%
- **No personal income source**: 10%

Note: Including financial support from relatives (4%), disability benefits (3%), etc.

Note: The age range captures those who are more likely involved in paid work (18-64)

Economic activity preferences in place of displacement (all respondents)

- **Prefer to work for an employer**: 46%
- **Prefer to have own business**: 25%
- **Don’t know, N/A**: 4%
- **Preference self-employment**: 1%
- **None of those**: 20%

Note: Category ‘Doing housework’ includes those who said they are in maternity leave

INTERNATIONAL ORGANIZATION FOR MIGRATION (IOM)

Note: % numbers reported are rounded for ease of use.

When quoting, paraphrasing or in any way using the information mentioned in this report, the source needs to be stated appropriately as follows: “Source: International Organization for Migration (IOM), Ukraine Internal Displacement Report, Round 8, August 2022.”
The majority of returnees report returning from places further away – similar share to Rounds 6 and 7, but increased share compared to Rounds 4 and 5. The trend is also stable regarding the proportion of individuals returning from abroad: 15% in Round 8 (16% in Round 7). As of August 23, an estimated 925,000 had returned from abroad in total.

As in earlier rounds, most returnees do not intend to leave their places of habitual residence again in the future. Of the 6 million returnees total, only estimated 661 thousand returnees are considering to leave their homes again (11%). The share of returnees who plan to leave their homes again due to the war is the highest in the South (22%), followed by the Centre (14%) and East macro-region (12%). In Kyiv, 86% of returnees are set on staying home.

Among IDPs, 11% indicate that they plan to return to their places of habitual residence within the upcoming 2 weeks, marking a continued decrease in the anticipated number of IDP returns (12% in Round 7, 15% in R6), and translating into estimated 780,000 forthcoming returns. A relatively large proportion of IDPs (7%) state their return will depend on further situation development. IDPs originally from the Kyiv macro-region are most likely to be planning to return at the present time (27%), followed by IDPs from the North macro-region (17%).
More than a half of returnees aged 18-64 are economically active – employed or self-employed, and an additional 17% are actively searching for employment. While the share of returnees without income has decreased by nearly 10% since May, an additional share of returnees experienced a salary reduction – 42% of returnees now earn less than they did before February 2022. Over 66% of returnees who are employed or self-employed report working 40 hours per week or more. Interestingly, only 14% of employed or self-employed returnees reported working fully offline, while 57% reported working fully online or remotely.

How has your personal ability to earn money been affected by the war?

- Earn more money than before the war: 12% (R5), 10% (R8)
- Earn as much as before the war: 39% (R5), 42% (R8)
- Earn less money than before the war: 37% (R5), 28% (R8)
- Don’t earn any money now: 1% (R5), 3% (R8)

The structure of needs among returnees differs significantly from needs reported by other population sub-groups, such as IDPs, given the specific nature of their situation. Share of returnees who report currently being in need of the below:

- Food: 19%, 22% (R5), 21% (R8)
- Medicine/health care: 16%, 22% (R5), 20% (R8)
- Hygiene items: 5%, 12% (R5), 10% (R8)
- Accommodation: 9%, 5% (R5), 7% (R8)
- Transportation: 17%, 17% (R5), 17% (R8)
- Information: 7%, 14% (R5), 11% (R8)
- NFI: 12%, 14% (R5), 13% (R8)
- Cash: 63%, 69% (R5), 67% (R8)

More than half of returnees aged 18-64 are economically active – employed or self-employed, and an additional 17% are actively searching for employment. While the share of returnees without income has decreased by nearly 10% since May, an additional share of returnees experienced a salary reduction – 42% of returnees now earn less than they did before February 2022. Over 66% of returnees who are employed or self-employed report working 40 hours per week or more. Interestingly, only 14% of employed or self-employed returnees reported working fully offline, while 57% reported working fully online or remotely.

How has your personal ability to earn money been affected by the war?

- Earn more money than before the war: 12% (R5), 10% (R8)
- Earn as much as before the war: 39% (R5), 42% (R8)
- Earn less money than before the war: 37% (R5), 28% (R8)
- Don’t earn any money now: 1% (R5), 3% (R8)
COMPARATIVE ANALYSIS OF SITUATION AND NEEDS

Those displaced and those in the locations of their habitual residence within Ukraine (whether returnees or non-displaced) face critical needs. The profile and situation of the sub-groups differ slightly, however, often requesting tailored support. The overview below highlights group differences within IOM’s sample of the general population survey.

MOST PRESSING NEEDS

Cash (financial assistance), medicine and health services, and building or reconstruction materials continue to be the most pressing needs identified among all respondents. For example, 68% of Returnees identified cash as their most pressing need. For overall needs assessment please see →

NEEDS: GENDER DIMENSION

The displaced female respondents were more likely to report additional categories of needs, such as hygiene items (33%), financial support (79%) and non-food items (38%). The difference was also noticeable, depending on the macro region of stay. The lack of financial support was stated more often by women from the west of the country (83%).

HOUSING SITUATION

Only 3% of IDPs continue to reside in collective centers while majority have arranged to rent a home independently. See cash section for data on rental costs.

INTERNATIONAL ORGANIZATION FOR MIGRATION (IOM)

Note: % numbers reported are rounded for ease of use.

When quoting, paraphrasing or in any way using the information mentioned in this report, the source needs to be stated appropriately as follows: “Source: International Organization for Migration (IOM), Ukraine Internal Displacement Report, Round 8, August 2022.”
A sizeable proportion of IDP respondents indicate that they are in need of hygiene items (22%), while the need also remains high (9%) among non-IDPs. Among both IDPs and non-IDPs, women report hygiene needs twice as often as men (IDPs: 15% men vs 33% women, non-IDSPs: 16% women vs. 7% men). Over a third (37%) of all respondents who indicate WASH needs specify that they are in need of menstrual hygiene items, and 18% indicate the need for diapers (baby and/or adult). Lack of safe toilet access is continually reported by very few respondents – 3% of displaced persons.

Access to drinking water continues to be an issue for the population residing in the macro-regions South and East, where 12% and 10% of the population continue to lack drinking water. Availability of drinking water has deteriorated in the South macro-region since March 2022. In the East, IDPs report lack of drinking water comparatively more often than other population groups.

Need for building/reconstruction materials for repair

The need for shelter repair materials remains high throughout Ukraine (from 18.5% in June, 27% in July, to 24% in August 2022), though slightly lower in the Kyiv macro-region. Reported needs are particularly high among non-IDPs. Overall, 7.4M individuals are estimated to be in need of shelter repair materials in Ukraine (24.3% of the general population).*

Shares of respondents reported a lack of drinking water (all respondents)

The in-depth exploration of winterization needs in Round 7 of the survey revealed a particularly alarming situation among IDPs. IOM included additional indicators on this topic in surveys with IDPs in Round 8 to provide further evidence in support of response development:

IDPs say that their housing is inadequate for winter

The situation is slightly worse among IDPs in the East and North macro-regions, where 26.4% and 26.5%, respectively, report their housing being inadequate for winter conditions.

IDPs in inadequate housing do not plan to move to a more appropriate lodging

Relocation to housing which is more appropriate for the forthcoming seasons is not feasible for all, with cost identified as a key consideration in the decision.

Among the top reasons for not planning to move are lack of funds to cover rent in a more appropriate housing arrangement – this is true for 75% of those who plan to stay in inadequate lodging.

Among IDPs in inadequate housing, those in the North are least likely to plan to move – 70% say they plan to stay in the inadequate lodgings. In both the South and Centre, 40% plan to stay in inadequate lodging.

Among those IDPs in inadequate lodging who do plan to rent new housing for the winter period, 90% indicate they do not have sufficient funds to cover rent.
A snapshot of data relevant to diverse humanitarian sectors is continued below, covering the general population unless specified otherwise:

**HEALTH**

**MEDICINES AND HEALTH SERVICES AVAILABILITY**
Across Ukraine, 26% report a lack of medicines and health services. The macro-regions reporting the highest shortage of medications and medical services are South & East (31% and 29%, respectively).

**AVAILABILITY OF MEDICATION**
Among all respondents, 27% indicated that they or someone within their family had to stop using their medication because of the war. Among those, 68% indicated they were not able to secure the medicines due to availability, and 63% stated they could not afford to buy the medicines (respondents could indicate multiple reasons). Among IDPs, a higher share – 32% indicated they or their household members stopped taking their medication due to the war.

Among those who reported they or their family member stopped taking their medication due to the war, the share reflected on the chart identified a specific type of medication lacking:

- Cancer medications: 51%
- Antibiotics: 49%
- Diabetics: 28%
- Hypertension medications: 27%
- Cardiovascular disease medications: 27%
- Other: 57%

**FOOD AND NUTRITION**
Across the country, nearly a quarter (22.5%) reported a lack of food in IDPs. 27% indicated a lack of food – significantly more than other population groups (21% of non-IDPs and returnees). The most acute food shortage is reported by (all) respondents in the southern macro-region, where 20% indicate a lack of food – an improvement from 30% in R7.

**MENTAL HEALTH AND PSYCHOSOCIAL SUPPORT NEEDS**
Among all respondents, 25% requested to receive the number of IOM’s free psychological support hotline, compared to 16% in Round 2, and 11% of respondents in Round 1 of the survey. Among IDPs, 31% requested the free psychological support hotline number for support in Round 8. Overall, women were more likely to request support than men (30% vs 17%).

**INFANT AND CHILD NUTRITION**
54% of IDP households with infants and children under the age of five say they experience problems in getting enough food for their baby/babies since the start of the war (e.g. formula).

This is a significant increase compared to 32% as of July 23. Among non-IDPs, 31% report the same issue. The problem is not isolated to the East and South; e.g. 60% of IDPs with children in the West also report having this problem.
The data presented in this report was commissioned by the International Organization for Migration (IOM) and collected by Multicultural Insights through a rapid phone-based survey. Seventh round of data collection among a set of unique 2,001 adults (18 years and above) was completed between 17 and 23 August 2022. This probabilistic sample, representative of over 30 million Ukrainian adults (18 years or older), was stratified to achieve representativeness at the level of 6 macro-regions of Ukraine. The sample frame was constructed by developing a list of 100,000 ten-digit phone numbers created by combining the three-digit prefix used by mobile phone operators with a randomly generated seven-digit phone number. The generated sample frame was proportional to the national market share of the six phone networks covered in the study. Using the random-digit-dial (RDD) approach, phone numbers were randomly generated, producing a new number every millisecond interval. Interviewers were anonymous, and respondents were asked for consent prior to starting an interview. Interviewers used a structured questionnaire and the computer-assisted telephone interview (CATI) technique to directly enter the results into a data entry program.

Using this methodology, for Round 8, interview teams were able to successfully complete the surveys with 2,001 unique eligible and consenting adult respondents. While the response rate using the RDD approach in Ukraine has typically yielded a response rate of ca 7-8%, in Round 8 of this survey, a response rate of 13.1% was achieved. A total of 30 interviewers were employed for this work. The team was composed of 5 male and 25 female interviewers. Interviews were conducted in Ukrainian (79%) and Russian languages (21%), with language selection following respondents’ preference.

Limitations: The exact proportion of the excluded populations is unknown, and certain considerations are to be made when interpreting results. Those currently residing outside the territory of Ukraine were not interviewed, following active exclusion. Population estimates assume that minors (those under 18 old) are accompanied by their adult parents or guardians. The sample frame is limited to adults that use mobile phones. It is unknown if all phone networks were fully functional across the entire territory of Ukraine for the entire period of the survey; therefore, some numbers may have had a higher probability of receiving calls than others. Residents of areas with a high level of civilian infrastructure damage may have a lower representation among the sample – one may assume the needs in the report are skewed towards under-reporting. Among the people surveyed are not those residing in the Autonomous Republic of Crimea (ARC) or the NGCA Donetsk and Luhansk.

Caveat: The survey collected information on the people’s characteristics, their current locations and/or locations after the displacement (geographical information), intentions to move and planned destinations, needs, and issues faced by the people during the crisis. The analysis relies on two approaches when assessing the population profiles, their issues, and needs. The analysis of geographical profiles utilizes the data, excluding the missing values identified at the macro-region level (n=2,001). The needs assessment and all other analysis is done using the available sample (considering the question refusal rate).

### Definitions

The IOM Glossary on Migration defines Internally Displaced Persons (IDPs) as persons or groups of persons who have been forced or obliged to flee, or to leave their homes or places of habitual residence, in particular as a result of or in order to avoid the effects of armed conflict, situations of generalized violence, violations of human rights or natural or human-made disasters, and who have not crossed an internationally recognized State border. Operationally, for this exercise, interviewers define and understand IDPs as persons who left their habitual place of residence due to the current war.

IOM defines a returnee as a person who had undergone a migratory movement and arrived back to their original place of habitual residence. For purposes of the present analysis, IOM identified as returnees those respondents who indicated having left the place of their habitual residence since the 24th of February due to the current war for a period of a minimum of 2 weeks (14 days), but who have indicated that they had since returned.

The 1951 Refugee Convention defines a refugee as Someone who is unable or unwilling to return to their country of origin owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion.

The designations employed and the presentation of material throughout the report do not imply expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries. The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the IOM.
