The Transhumance Tracking Tool (TTT) collects key data on transhumance movements in Kaduna and Katsina States, with the aim to provide the information needed for supporting peaceful transhumance.

To better understand the transhumance movement trends and the impact of vulnerabilities on transhumant communities, IOM has developed the Transhumance Tracking Tool (TTT) through its Displacement Tracking Matrix (DTM). The TTT forms a part of an early warning system that detect massive or unexpected movements of livestock as well as transhumance-related events which could cause conflicts between herders and farmers. The system makes it possible to identify alerts related to a conflict event (event alert) or to a massive, early, late or unexpected movement of livestock (prevention/movement alert) which could lead to conflicts, often related to the use of natural resources or agro-pastoral practices. The system helps understand the existing conflict resolution methods, and to inform competent stakeholders to reduce tensions in the affected areas of intervention. These alerts, once transmitted to the various actors, are used for conflict prevention or actions towards resolutions.

This report presents results from the alert tool for the month of December 2023. A network of key informants selected from members of the Community Response Networks (CRNs) and Local Government Area-based team leads, were employed for data collection.

In December 2023, the TTT early warning tool captured 179 alerts in Faskari and Kaita LGAs of Katsina State, and Kachia and Kaura LGAs of Kaduna State. The triangulated alerts included events (22%) and sudden movements (78%) during the period. Agunu, Gidan Tagwai and Manchok wards located in Faskari, Kaita and Kaura LGAs shared the highest number of recorded event alerts in these locations.

TYPES OF ALERTS

CONSEQUENCES OF EVENTS

The movement alerts for December indicated that 41 per cent of the movement reported related to other movements and 32 per cent were categorized as massive movements. These movements involved 56,329 livestock and all transhumance movements recorded were within Nigeria. The probability of the reported movement alerts resulting to massive or late movements of herders-farmers groups was 91 per cent with 81 per cent likelihood of causing herders-farmers conflict. Additionally, the probability of risk materialization was 86 per cent likelihood and 13 per cent unlikelyhood.

Forty-eight per cent of the total primary event alerts were related to kidnapping and banditry. This was followed by herders-farmers conflict (35%), terrorist attack (15%) and inter-community tensions (3%). The herders-farmers conflicts related to transhumance movement were reportedly caused by farm or crop destruction, farmland encroachment, non-use of official corridors and damages in surrounding fields. Among the key actors involved in the event alerts were community members/kidnappers (53%), local farmers and breeders (45%), pastoral groups in transhumance (45%), non-state armed groups (30%), and national or local authorities (8%).

Among the key actors involved in conflict management were the local and/or national authorities (10%), pastoral organization (10%) and CRN committee (8%). Notwithstanding, 67 per cent of the events that occurred were resolved, while 33 per cent were not resolved.

MOVEMENT ALERTS

Data consisting of multi-choice options*

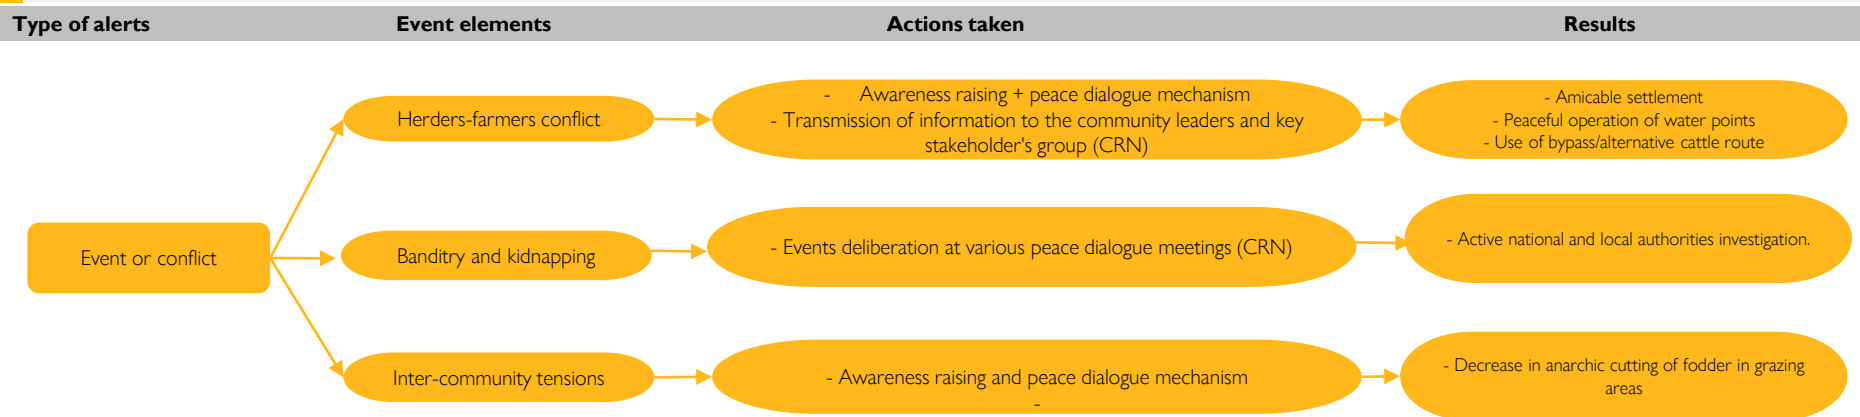

EVENT ALERTS

In response to the transmission of alerts by key informants and investigators to focal persons in Kaura LGA of Kaduna State, actions were undertaken by different local actors for conflict resolution. Responses were provided to mitigate the situation indicated by the "event alerts" and to avoid an imminent inter-community conflict or tension indicated by the "movements alerts". Thus, subject to the type of alerts, corresponding actions are taken to resolve or prevent conflicts related to transhumant movements. Highlighted below are some course of actions taken to register and resolve alert types.

RESPONSES TO EVENTS ALERT

RESPONSES TO MOVEMENT ALERT

There were active involvement of the CRNs in the resolution of all the conflicts signaled by the alerts Kaduna and Katsina states. It should be noted that pastoral organizations and farming communities, in consultation with local authorities contributed to the resolution of conflicts and the anticipated movement as reported by alerts. The members of these communities responded to certain conflict related alerts by providing appropriate solutions to promote peaceful transhumance in the states.
