A total of 164,626 IDPs were registered in Sudan between January and June 2016. The greatest number of IDPs registered by IOM this year has been in South Kordofan, which mainly consisted of an old caseload of IDPs that was re-registered, however old and new IDPs in South Kordofan together counted for 70% of the total registered caseload. South, North and West Darfur combined made up the remaining 30%.

**DEMOGRAPHIC DATA**

Registered IDPs have 53% females and 47% males, whereas the gender breakdown in the four states varied as shown in the figure below. The largest age group registered was in the 5 to 17-year age bracket, as approximately 46% were below 18 years of age, and only 5% were 60 years and above.

**RETURNEES POPULATION**

A total of 93,487 individuals were registered as returnees. Returnees were nearly equally split as 50% females and 50% males. Whereas the gender breakdown in the three return states varied as shown in the figure below. The largest age group registered was in the 5 to 17-year age bracket, as approximately 45% returnees were around 18 years of age, and only 5% were 60 years and above.

**VULNERABILITY**

The largest vulnerable group identified were lactating mothers (1,165 individuals), followed by pregnant women (1,859 individuals). Together this group of vulnerable women represents approximately 11% of all the female returnee population registered. This vulnerable group also represents 26% of the returnee female demographic between the ages of 18 and 59.
