34 Flow Monitoring Points (FMPs) and 11 Information Points (IPs) are currently operational in eight countries. In November 2019, an FMP was opened in Koupé in Cameroon.

In Burkina Faso, data is collected at five FMPs located at strategic transit points throughout the country. In November 2019, an average of 1,894 individuals were observed crossing the FMPs daily—a 9 per cent increase from the October figures (1,734). The majority of travellers (64%) were adult men, while 23 per cent were adult women and 13 per cent were children. Six per cent of individuals were children under five and 6 per cent were pregnant women.

Across all FMPs in the country, a large majority of travellers had departed from Burkina Faso (81%) followed by Niger (6%) and Togo (6%). The three primary destinations of flows were Côte d’Ivoire (42%, a 5 p.p. decrease from October), Niger (22%) and Burkina Faso (19%). In numbers similar to that of previous months, seasonal migration (37%), short-term local movements (32%) and long-term economic migration (27%) were the main reasons for travel. When compared to the previous reporting period, the share of Burkinabé migrants dropped significantly, dropping to 45 per cent of travellers (or a 20 p.p. decrease, as did the share of Nigerien nationals (18%), representing a decrease of 8 p.p.). The share of Nigerian (6%) and Malian (14%) travellers, in contrast, grew by 6 p.p. and 8 p.p., respectively.

The Kousséri FMP, in the Far North region of Cameroon, which was activated in November 2019, primarily records flows to and from Chad. Kousséri borders Chad (the neighbouring city on the Chadian side of the border is N’Djamena, Chad’s capital).

In November 2019, an average of 805 individuals were recorded at the Kousseri FMP each day. Most (83%) individuals observed were male, while 17 per cent were female. Thirteen per cent were children, including 2 per cent of children under five years of age.

The majority of travellers (62%) were travelling to Cameroon, while 25 per cent were headed to Chad and 11 per cent were going to Nigeria. In terms of provenance, most individuals had travelled from Cameroon (70%), with 27 per cent and 2 per cent having come from Chad and Nigeria, respectively.

Travellers crossing the Kousseri FMP were primarily performing long-term economic migration (44%), short-term local movements (24%) and seasonal migration (21%). Notably, 3 per cent of travellers were forcibly displaced, namely by torrential rains and floods which affected...
the Far North in October and November 2019.

With the Kousseri FMP located along to the Chadian border, the vast majority of travellers transiting through the FMP were either nationals of Cameroon (48% of travellers) or Chad (38%). Further, because Kousseri is located relatively close to the border with Nigeria, a significant proportion of individuals (11%) were from Nigeria.

In Chad, data is collected at FMPs in Zouarke, Faya (in northern Chad), Rig-Rig (located close to the Niger border) and Sarh (situated in southern Chad). The Kalalit FMP was definitively closed in June 2019.

Over the reporting period, an average of 648 individuals per day were recorded at the four FMPs, an 8 per cent decrease when compared to October 2019 (707).

The primary reasons for travel were short-term economic movements (representing 45% of flows) and long-term economic migration (36%). The share of seasonal migrants observed amongst travellers was 10 per cent.

The majority of travellers (74%, an increase of 6 p.p. from the previous reporting period) were adult men, while the share of women was 17 per cent (a 5 p.p. decrease from October). Children represented 9 per cent of travellers observed. Four per cent of travellers were children under five years old, while 6 per cent were pregnant women, 2 per cent were elderly and 3 per cent were living with a mental or physical handicap. The vast majority of identified individuals (57%) were Chadian nationals, while an incidental share of travellers were CAR (2%) or Nigerian (1%) nationals.

In Guinea, data is collected at three FMPs located in Bountoufoudoun (along the border with Senegal), Kouremalé and Nafadji (both along the border with Mali), which observe flows to and from Mali and Senegal.

In November 2019, a daily average of 1,356 individuals was observed at the FMPs. This represents a 4 per cent decrease when compared to October 2019 (1,416) which follows a 7 per cent decrease between September and October. This reduction in flows may be linked to the asphaltation of a new road linking Bamako to Djoulafoudoun and bypassing the Nafadji FMP. It may also be explained by the fact that the end of the rainy season makes a more direct route linking Senegal to Guinea and bypassing the Bountoufoudoun FMP more easily accessible.

When compared to other countries in the region, larger shares of the observed migrants were adult women (34%, 4 p.p. more than in October) and children (22%, a 3 p.p. decrease), including 6 per cent of children under five years old. In contrast, a much smaller proportion of travellers (44%) identified in Guinea compared to other countries were adult men. The largest share of migrants observed (66%, a 3 p.p. decrease when compared to the previous reporting period) were Guinean nationals, while the rest originated from a variety of countries in the West and Central Africa region (including 8% from Mali, 4% from Sierra Leone and 3% from Côte d’Ivoire).

The primary reasons for travel were long-term economic migration (48%), short-term movements (39%) and seasonal migration (9%).

The majority of individuals observed (56%) were leaving the country: most outgoing travellers (primarily observed in Kouremalé and Nafadji) were headed to Mali (28%), while Senegal, the second most mentioned destination (mainly by travellers in Bountoufoudoun) accounted for 23 per cent of total flows.

In Mali, the Gogui FMP, located on the border between Mali and Mauritania, observes mobility flows between the two countries, while the Walbara (in the city of Gao), Timbuktu, Inhalal (in Kidal region), Place Kidal and Ménaka FMPs mainly capture travellers heading towards Algeria or travelling within Mali. The other FMPs (Bamako, Sévaré, Here-Makono, Benena) are major transit stations dispatched throughout the country.

Average daily flows observed in November 2019 decreased by 5 per cent (from 280 to 267 observed on average each day). This follows a 9 per cent drop between September and October. A large majority of observed individuals (82%) were adult men, while 14 per cent were adult women and 4 per cent were children. Malian nationals were the most prevalent nationality group amongst travellers observed at FMPs in Mali (representing 37% of travellers), Guinean (15%), Ivorian (8%), Burkinafasso (7%) and Gambian (6%) nationals were other well-represented nationality groups, reflecting the breadth and diversity of individuals transiting through Mali during their migration journey.

In terms of destination of travellers, the majority of individuals were travelling to a destination in Mali (55%). Algeria, the foremost destination until March 2019, in November 2019 ranked fourth, accounting for 9 per cent of flows. Other significant destinations of flows were Burkina Faso (16%) and Mauritania (14%).

A large majority of migrants (93%, a 4 p.p. increase when compared to October) were undertaking long-term economic migration. Five per cent of travellers were seasonal migrants, while only 1 per cent were conducting short-term movements (a stark decrease of 5 p.p. from the previous month).

In Nigeria, the Sokoto FMP captures flows between Nigeria and Niger (mainly to Maradu, Tahoua and Agadez) with observed travellers split between those departing Nigeria for Niger and those arriving to Nigeria from Niger. The Kano FMP captures flows between Nigeria and Niger, Chad, and, in smaller numbers, Cameroon. Observed flows are mainly composed of outflows from Nigeria to Niger, or internal travel within Nigeria.

The number of individuals observed at the Kano and Sokoto FMPs in November 2019 (1,163) witnessed a slight drop in per cent decrease from the previous month (1,192). The majority of observed individuals (64%) were adult men, while 20 per cent were adult women and 16 per cent were children, including 5 per cent of children under five. Notably, 14 per cent of travellers were elderly (aged 60 or older). Travellers were primarily carrying out short-term movements (45%), long-term economic migration (37%) or seasonal migration (12%).

The main nationalities observed were Nigerian (53%), Nigerien (33%) and Chadian (5%) nationals. The majority of observed individuals were travelling to Niger (62%), while 36 per cent were travelling to Nigeria and 1 per cent to Chad and Cameroon respectively. Similarly, the majority of travellers (64%) were from Nigeria, while 36 per cent were travelling from Niger.

In Niger, the Aïr and Séguèdine FMPs primarily observe movements to and from Algeria and Libya, respectively. Three of the FMPs (Dan Issa, Dan Barto
and Magaria) are located along the border between Niger and Nigeria. The FMP at Tahoua, situated in central Niger, between the Tillabery region in the east, Nigeria in the south and the Agadez region in the north, was established to help understand internal movement flows. Finally, the Madama FMP, located on the Libyan border, was set up to capture flows that were not caught by the Séguéline FMP because of the proliferation of bypass routes.

An average of 1,707 individuals were observed daily at the seven FMPs in October 2019, representing a 3 per cent increase as compared to October 2019 (1,657). The majority (70%) were adult men, while 19 per cent were adult women and 11 per cent were children. The share of children under five was 5 per cent. Four per cent of individuals crossing through FMPs were pregnant women, 2 per cent were elderly and 1 per cent were living with a physical or mental disability.

The majority of flows observed were internal movements (50%). This represents a slight decrease (of 3 p.p.) from the previous month. Meanwhile, outgoing flows represented 31 per cent of all flows, a 6 p.p. increase from the previous reporting period, and incoming flows accounted for 19 per cent of flows, a 3 p.p. decrease. The primary reasons for migration were long-term economic migration (38%), seasonal migration (37%) and short-term movements (25%).

Niger and Nigeria were the main countries of provenance: 81 per cent of travellers were going to Niger and 8 per cent of travellers were headed for Nigeria. In addition, 5 per cent of migrants were travelling to Libya. Similarly, Niger was the main country of destination of travellers, although the share of individuals going to Niger decreased by 6 p.p. (from 76% of flows to 70%). Meanwhile, 9 per cent of travellers intended to go to Nigeria. In addition, 11 per cent of flows were headed towards Libya, a 3 per cent decrease since October 2019.

The majority of individuals observed at the seven FMPs were Niger nationals (85%), with the next most-represented nationality being Nigerians (10%).

In Senegal, data is collected at Flow Monitoring Points in Kidira (situated on along the border with Mali) and Moussala (located close to the Malian and Guinean borders). Between September and October 2019, the number of individuals observed at the two FMPs almost doubled, going from 193 to 374. This astounding increase is due to the occurrence of the religious of Magal, one of the largest religious pilgrimages in the West African region. Most travellers (58%) were adult men (a 2 p.p. increase compared to September), while 31 per cent were adult women. Ten per cent were children, representing a 3 p.p. decrease since the previous reporting period, including 4 per cent who were under five years old. Additionally, 2 per cent of travellers were elderly and 3 per cent were pregnant women.

In a stark reversal from the previous reporting period, the largest proportion of travellers indicated conducting long-term migration (60%), while the next largest groups reported performing short-term movements (33%) and tourism (4%). This change may be linked to the tightening of controls and stricter migration policies along the Algeria-Mali border, which have driven migrants to take alternative migration routes, including routes crossing Senegal.

The majority of observed travellers (77%) had travelled from Mali. This represents a 8 percentage point drop from the previous month. On the other hand, the share of travellers who arrived from Senegal and The Gambia increased by 7 percentage points (up to 18% of flows) and 1 per centage point (up to 5%), respectively. Meanwhile, the share of migrants travelling to Senegal witnessed an decrease of 4 per cent (to reach 73%), while a larger share of travellers was headed to Mali (21%, an 5 p.p. increase compared to the previous month). In addition, 5 per cent of travellers were going to The Gambia.

While the majority of observed individuals (45%, a 5 p.p. decrease since September) were Malian nationals, the share of Senegalese travellers grew significantly in October (42%, a 7 p.p. increase from the previous reporting period). The increase in identified Senegalese nationals may be linked to the Magal pilgrimage, during which Senegalese nationals travel throughout the West Africa region to the city of Touba in Senegal. The remaining travellers were from a variety of West African countries, including The Gambia, Nigeria, Niger, Côte d’Ivoire, Ghana and Burkina Faso.

** Burkina Faso **

Current Implementation Round
Round 2 (TBD)

Latest count of populations tracked and monitored
As of Round 1 – August 2019
10,293 Internally Displaced

Total number of displaced individuals identified in the country, as of 8 October 2019
486,360 Internally Displaced [OCHA]

Implementation Components
Household Survey, Mobility Tracking (Baseline), Registration

Current Geographical Coverage
34 locations in Est Region

Published Information Products
Household Profile, Displacement Dashboard, Displacement Report

displacement.iom.int/burkina-faso

DTM Burkina Faso conducted Round 1 of Mobility Tracking (Baseline) assessments in 34 locations of Burkina Faso’s Est Region, identifying 10,293 Internally Displaced Persons (IDPs).

Discussions with the government and humanitarian partners are underway to implement Round 2 of DTM assessments, which are expected to expand to additional regions.

DTM assessments in Burkina Faso cover one region (Est Region), and numbers provided only reflect the displacement situation in that region and are not representative of total displacement in the country. The United Nations Office for the Coordination of Humanitarian Affairs (OCHA) provides estimates of the total number of displaced in the country.

** Cameroon (Far North) **

Current Implementation Round
Round 21 (April 2020)

Latest population count tracked and monitored
As of Round 20 – November 2019
297,380 Internally Displaced
106,131 Returnees (former IDPs)
10,848 Returnees (from abroad)
47,305 Out of Camp Refugees

Implementation Components
Mobility Tracking (Baseline), Survey

Current Geographical Coverage
931 locations in Far North Region
DTM Cameroon conducted Round 20 of its Mobility Tracking Baseline Assessment activities between 25 November and 6 December 2019, identifying 297,380 Internally Displaced Persons (IDPs), 116,970 Returnees (106,131 former IDPs and 10,848 Returnees from abroad) and 47,305 Out of Camp Refugees.

The number of displaced saw a stark increase between Rounds 19 and 20: the number of IDPs witnessed a 10 per cent increase (up from 170,870) as a result of severe flooding in October which affected the Far North Region and caused significant displacement. Meanwhile, the number of returnees grew by 6 per cent (up from 110,574) and the number of Out-of-camp Refugees rose by 1 per cent (up from 46,845). These increases may also be linked to the wider coverage of DTM assessments, with 68 additional locations assessed during Round 20.

Most displaced persons (197,184, or 43% of displaced) resided in Logone-et-Chari Division, followed by Mayo-Sava (132,772, or 29%) and mayo-Tsanaga (89,899, or 19%). Forty-one per cent lived with host families, while 24 per cent lived in spontaneous/makeshift shelters and 16 per cent lived in their original dwellings.

The displaced population was equally shared between men (50%) and women (50%). Close to two-thirds of displaced persons (64%) were children.

The main needs of the displaced population were drinking water (44%), food (27%) and agricultural equipment (7%).

DTM Cameroon will begin data collection for Round 21 of its Mobility Tracking (Baseline) Assessments in April 2020, and results are expected to be published in May 2020.

Central African Republic

Current Geographical Coverage
1,163 locations in North-West and South-West, Litoral and West Regions

Total number of displaced individuals identified, as of September 2019
536,107 Internally Displaced [OCHA]
237,349 Returnees [OCHA]

DTM Cameroon conducted Round 2 of Mobility Tracking (Baseline) and Multi-Sectoral assessments in August 2019 to evaluate the evolution in numbers, living conditions and sectoral needs of populations displaced and affected by the crisis. These assessments were carried out in collaboration with the Organisation for the United Nations Coordination of Humanitarian Affairs (OCHA).

DTM assessments were suspended as a result of growing insecurity. No date has yet been set for the resumption of activities.

Chad (Lac)

Current Implementation Round
Round 10 (January 2020)

Latest count of populations tracked and monitored
As of Round 9 – September 2019
169,003 Internally Displaced
15,053 Returnees (former IDPs)
32,311 Returnees (from abroad)
5,652 Third Country Nationals

Implementation Component
Mobility Tracking (Baseline), Mobility Tracking (Site), Emergency Tracking, Household Registration

Current Geographical Coverage
184 sites in Lac Province

Published Information Products
Displacement Report, Displacement Dashboard, Site Profiles, Maps

displacement.iom.int/chad

Between 5 May and 10 July 2019, DTM carried out Round 8 of its Baseline Mobility Tracking assessments, identifying a total of 1,401,261 displaced people, including 537,285 IDPs, 600,479 returnees (former IDPs) and 263,497 Returnees from abroad.

Due to logistical issues, Round 9 of DTM assessments, initially planned for November 2019, will be conducted in December 2019, with results expected to be published in February 2020.

DTM assessments cover nine of the sixteen prefectures of the Central African Republic (CAR). DTM figures consequently refer to the number of displaced individuals in the area covered and are not representative of total displacement in the country. The CAR government’s Commission sur les mouvements de populations (CMP), with the support of UNHCR, provides estimates of the total number of internally displaced persons (IDPs) in the country.

Cameroon (North-West + South-West)

Implementation Components
Mobility Tracking (Baseline), Mobility Tracking (Site)
placements and events between rounds of Baseline Assessments, DTM Chad identified four events in November 2019 (one case of repatriation of migrant workers following the closure of gold mines linked to insecurity and three instances of preventive displacement for fear of attacks by extremist armed groups) during which 1,439 individuals (460 households) were displaced.

** Chad (Logone-Oriental + Moyen-Chari) **

Current Implementation Round Round 3 (December 2019)

Latest count of populations tracked and monitored As of Round 2 – October 2019 77,650 Returnees (from abroad)

Implementation Component Mobility Tracking (Baseline), Mobility Tracking (Site)

Current Geographical Coverage 88 sites in Logone-Oriental and Moyen-Chari Provinces

Published Information Products Displacement Report, Displacement Dashboard

[displacement.iom.int/chad]

To gain a better understanding of the numbers and needs of Chadian nationals fleeing the crisis in the Central African Republic (CAR) and returning to Chad’s southern region, baseline assessments were conducted in 88 locations of Logone-Oriental and Moyen-Chari, identifying 77,650 Chadian returnees from CAR (33,817 in Logone-Oriental and 43,833 in Moyen-Chari). DTM Chad will conduct Round 3 of assessments in December 2019, and results are expected to be published in January 2020.

** Mali **

Latest count of displaced populations As of 31 October 2019 199,385 Internally Displaced 561,606 Returnees (former IDPs) 74,397 Repatriated 138,954 Refugees [UNHCR]

Implementation Component Mobility Tracking (Baseline), Registration

Current Geographical Coverage Country-wide

[displacement.iom.int/nigeria]

In the Round 29 data collection exercise, conducted between 8 August and 11 September 2019, DTM Nigeria identified 2,035,232 Internally Displaced Persons (IDPs), and 1,619,010 Returnees (including 1,488,338 Returnees (former IDPs) and 130,672 Returnees (from abroad).

Since the previous round, the number of IDPs remained relatively stable, witnessing an increase of less than 1 per cent (up from 2,018,513). The number of IDPs has steadily increased since the onset of an escalation in violence in October 2018, and is similar to the number of IDPs identified during Round 25 (October 2018). However, because access has been difficult in many regions of the North East, and coverage of DTM assessments limited, and given current levels of violence, it may be assumed that levels of displacement are higher than estimated.

The number of returnees, for its part, dropped by 1 per cent; this is the first time the number of returnees has witnessed a decrease since DTM started recording the number of returnees in August 2015. This trend may be explained by the multiplication of attacks and the increase in violence observed since the fall of 2018, which has forced many returnees to flee.

Most displaced individuals (54%) were female (46% were male). In addition, the majority of displaced persons (56%) were children, while 4 per cent were 60 years old or older. The State of Borno continues to host the largest share of IDPs (1,496,871 IDPs, or 74% of IDPs).

The vast majority of the displaced population (91%) were displaced by the ongoing conflict in North East Nigeria, while 8 per cent fled intercommunal clashes and 1 per cent by natural disasters. Most displaced households (57%, down from 59% in the previous round) lived in host communities, while 43 per cent lived in camps or camp-like settings.

The most urgent needs of IDPs were food (for 71% of IDPs, a 2 p.p. decrease), NFI (15%, a 2 p.p. increase) and shelter (7%).

Round 30 of DTM assessments will commence in January 2020 and results will be published in February 2020.

In a Flash Report, DTM Nigeria also reported on fires which affected Borno State on 25 November 2019, affecting 79 individuals and destroying 23 shelters. The affected households were in special
need of food, shelter and Non-Food Items (NFI).

**

**Nigeria (North West + North Central)**

<table>

Latest count of populations tracked and monitored
As of Round 2 – September 2019

- Internally Displaced: 540,049

Implementation Component
Mobility Tracking (Baseline), Mobility Tracking (Site)

Current Geographical Coverage
630 Wards in 8 States (Benue, Kaduna, Kano, Katsina, Nasarawa, Plateau, Sokoto, Zamfara) of North West and North Central Geopolitical Zones

Published Information Products
Displacement Report, Displacement Dashboard, Flash Report

[displacement.iom.int/nigeria](https://displacement.iom.int/nigeria)

In the second round of assessments conducted in North West and North Central Nigeria, DTM identified 540,049 IDPs (88,631 households).

Round 3 of DTM assessments will be carried out in November 2019, with results expected to be published in January 2020.

DTM Nigeria in November 2019 reported on two major incidents which led to significant displacement of populations: on 17-18 November, attacks by bandits in Zamfara State displaced 6,419 individuals and caused 14 casualties; and 23 November 2019, clashes between herders and farmers in Adamawa State displaced 4,392 individuals and caused 10 fatalities. In both instances, IDPs were in most urgent need of food and Non-Food Items.

**

**Regional**

In addition to activities at country level, DTM in West and Central Africa will begin implementation of two region-wide programmes:

1. The Transhumance Tracking Tool (TTT) is a data collection activity currently implemented in Chad, the Central African Republic and Mauritania and expected to be implemented in Burkina Faso with the aim of gathering data and informing partners on agro-pastoralist movements throughout the WCA region. The TTT will also facilitate the establishment of an early warning system to prevent and mitigate conflicts.

2. The Stability Index is currently being implemented in all four countries of the Lake Chad Basin, or LCB (Cameroon, Chad, Niger and Nigeria) to assess the stability of return locations in regions affected by the LCB crisis and evaluate the needs of returnee populations. Regional analysis for the first round Stability Index assessments have been completed and results for the LCB are expected to be published in January 2020.
Between 8 August and 11 September 2019, Round XXXII of Mobility Tracking Baseline Assessments were conducted in 794 Wards in 6 States of North East Zone, identifying 2,033,232 IDPs, 1,488,338 Returns (former IDPs) and 130,672 Returns from abroad.

A Flow Monitoring Point (FMP) was opened in Katsina, Far North Region.

Round 20 of Mobility Tracking Baseline Assessments were carried out between 25 November and 6 December 2019 in 931 locations of Far North Region, identifying 297,300 IDPs, 106,131 Returns (former IDPs), 10,848 Returns from abroad and 47,305 Out-of-Camp Refugees.
