The DTM Emergency Event Tracking (EET) is deployed to track sudden displacement and population movements, and provide more frequent updates on the scale of displacement and quantify the affected population when needed. As a subcomponent of the new Mobility Tracking methodology in Sudan (Round Zero), and activated on a need basis, EET utilises a broad network of key informants to capture best estimates of the affected population presence per location – a useful tool for humanitarian response planning and design.

**Event Overview**

DTM teams activated EET to monitor the displacement of individuals affected by the inter-communal violence in West Darfur – for more information see EET_El Geneina 1 and EET_El Geneina 2.

The third EET update estimates a total number of 46,076 individuals (9,607 households) situated across 37 sites of displacement in El Geneina, having arrived from 11 locations of origin (an additional three locations recorded since the previous report). These updated figures indicate a decrease of 2,794 internally displaced persons (IDPs) (213 households) from the area – reports from the field suggesting that some households have now returned to their locations of origin. Returns were predominantly observed amongst IDP households whose homes did not burn down in the conflict.

**Shelter Indicator**

- **92.2%** of IDPs living in schools or other public buildings
- **5.8%** of IDPs living in host community
- **0.2%** of IDPs living in abandoned buildings (critical shelters)

**IOM DISCLAIMER**

The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the report do not imply the endorsement or acceptance by IOM.

Through DTM registration activities, IOM will be verifying these figures over the upcoming weeks to provide partners with beneficiary lists for their direct assistance.
