The flow monitoring component of DTM tracks movement flows of groups and individuals through key points of origin, transit locations and points of destination. The purpose of flow monitoring is to provide regularly updated information on the patterns and trends of population flows and profiles and intentions of IDPs on the move through specific locations. Trained enumerators collect data on two types of movements: i) internal flows within South Sudan and ii) cross-border flows to and from neighboring countries, mainly Sudan and Uganda. Depending on the location, the data is be collected by IOM or in partnership with trained local NGOs. The data collected through the flow monitoring point (FMP) will allow partners to better understand population movements and direct humanitarian assistance. The weekly snapshot highlights the key movement trends at certain FMPs during the reporting week while the attached dataset and dashboard provides detailed analysis for each FMP.
