New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Nutrition Sector partners for 309 children of 6-59 months. Of the 309 children screened, the MUAC reading was: 4 children (2 apiece from Inaccessible and accessible area) were in the Red category, 15 were in the Yellow category and 290 were measured in the Green category. No case of Oedema was reported in the 4 LGAs that sent in reports.

The results also include 13 children from a neighbouring Cameroon and Nigeri who all moved to Bama. Out of the 13 children measured, 2 were in the red category, 11 were in the green category and no child was in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. The data presented are not surveillance results and should be interpreted with caution.
