

COMMUNITY-BASED NEEDS ASSESSMENT

**SUMMARY RESULTS
PILOT • NIMROZ
MAY – JUN 2019**

IOM DTM strives to employ more female enumerators to collect gender-balanced information on the needs of vulnerable communities, as shown here in a focus group discussion in Chakhansur district. © IOM 2019

ABOUT DTM

The Displacement Tracking Matrix (DTM) is a system that tracks and monitors displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route.

In coordination with the Ministry of Refugees and Repatriation (MoRR), from May to June 2018, DTM in Afghanistan piloted a Community-Based Needs Assessment (CBNA), intended as an integral component of DTM's Baseline Mobility Assessment to provide a more comprehensive view of multi-sectoral needs in settlements hosting IDPs and returnees. DTM conducted the CBNA pilot at the settlement level, prioritizing settlements hosting the largest numbers of returnees and IDPs in seven target provinces of highest displacement and return, as determined by the round 5 Baseline Mobility Assessments results completed in mid-May 2018. This pilot was further expanded to include three additional provinces in May through June 2019.

DTM enables IOM and its partners to maximize resources, set priorities, and deliver better-targeted, evidence-based, mobility-sensitive and sustainable humanitarian assistance and development programming. For more information about DTM in Afghanistan, please visit www.displacement.iom.int/afghanistan.

COVERAGE

| Province | Districts | Districts Assessed | Settlements Assessed under BMA | Settlements Assessed under CBNA | % BMA Settlements Assessed |
|---------------|------------|--------------------|--------------------------------|---------------------------------|----------------------------|
| Baghlan | 15 | 11 | 560 | 201 | 36% |
| Helmand | 13 | 6 | 291 | 39 | 13% |
| Kabul | 15 | 9 | 542 | 201 | 37% |
| Kunar | 15 | 15 | 355 | 199 | 56% |
| Kunduz | 7 | 7 | 315 | 208 | 66% |
| Laghman | 5 | 5 | 207 | 152 | 73% |
| Nangarhar | 22 | 20 | 910 | 384 | 42% |
| Nimroz | 5 | 5 | 285 | 66 | 23% |
| Takhar | 17 | 16 | 506 | 199 | 39% |
| Uruzgan | 7 | 5 | 98 | 59 | 60% |
| Total | 121 | 99 | 4,069 | 1,708 | 42% |

HIGHLIGHTS

-  **5** districts assessed
-  **66** settlements with largest IDP and return populations assessed
-  **623** key informants interviewed
-  **92,929** individuals reside in the assessed settlements
-  **26,933** residents are returnees from abroad
-  **57,504** IDPs currently in host communities
-  **4,112** residents fled as IDPs
-  **7,317** residents are former IDPs who returned home
-  **11,863** residents fled abroad as out-migrants
-  **0** returnees and IDPs live in tents or the open air
-  **98%** (65 settlements) of assessed settlements have received no assistance in the 3 months prior to assessment
-  **98%** (65 settlements) of assessed settlements rated the quality of healthcare facilities as inadequate or poor
-  **39%** of men and 65% of women are fully unemployed
-  **42%** of surveyed households were unable to meet their basic nutritional needs

METHODOLOGY

DTM in Afghanistan aims to include the Community-Based Needs Assessment (CBNA) as a component of the existing Baseline Mobility Assessment (BMA), which tracks mobility and displacement. As a result, this pilot of the CBNA operates using the same methodology as the BMA.

Exactly as is done in the BMA, for the CBNA, DTM predominantly employs local enumerators from the areas of assessment, who collect quantitative data at the settlement level through community focus group discussions with key informants (KIs). Enumerators also collect qualitative data through direct observations to complement the quantitative research on living conditions, quality and access to basic services, the security situation and socio-economic indicators in each settlement.

The current version of the CBNA takes between two to three hours to complete, per settlement. Through IOM's partnership with the World Bank, DTM and the Bank will conduct a joint-analysis of the CBNA pilot data to produce a shorter, more streamlined CBNA tool that is aligned with the national Afghan Living Conditions Survey and can be implemented nationwide to produce actionable information at the district and settlement level to inform national development programming priorities.

Once this CBNA tool is refined and finalized by partners, this component will operate on the following basis. Enumerators will collect data, daily, using a paper-based form, which will be pre-filled with data from the previous round for verification of existing data and to expedite the assessment process. Completed forms will be submitted weekly to the provincial DTM office and verified for accuracy by the team leader and data entry clerk. Once verified, the data will be entered electronically via mobile devices, using KoBo forms, and submitted directly into DTM's central SQL server in Kabul, where it will be systematically cleaned and verified daily, through automated and manual systems. This stringent review process ensures that DTM data is of the highest quality, accuracy, and integrity.

5 TARGET POPULATIONS

Through the Baseline Mobility Assessments and Community-Based Needs Assessments, DTM tracks the locations, population sizes, and cross-sectoral needs of five core target population categories:

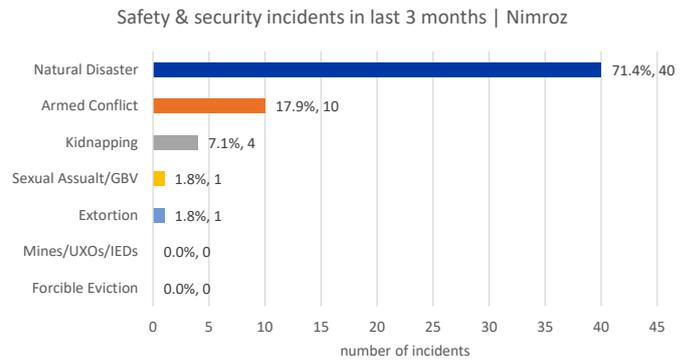

- Returnees from Abroad**
Afghans who had fled abroad for at least 6 months and have now returned to Afghanistan
- Out-Migrants**
Afghans who moved or fled abroad
- Fled IDPs**
Afghans from an assessed village who fled as IDPs to reside elsewhere in Afghanistan
- Arrival IDPs**
IDPs from other locations currently residing in an assessed village
- Returned IDPs**
Afghans from an assessed village who had fled as IDPs in the past and have now returned home

Data on population sizes for the 5 target population categories is collected by time of displacement, using each of the following time frames: 2012-2015 • 2016 • 2017 • 2018.

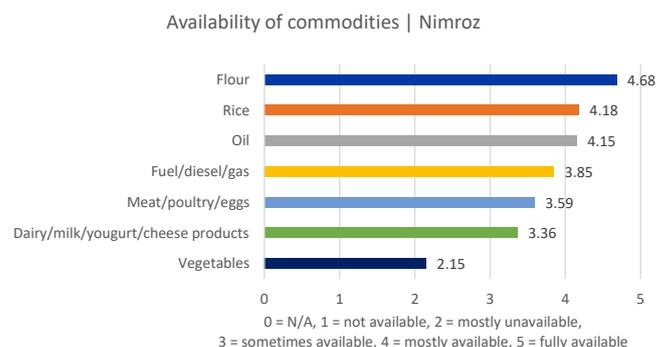

SAFETY & SECURITY

The most common safety and security incidents reported in the three months prior to the current assessment the are natural disaster (40 incidents), armed conflict (10 incidents), kidnapping (4 incidents) and sexual assault (1 incident). Nimroz also reported 8 injuries and fatalities due to conflict within three months prior to the assessment, all in Zaranj district.

MARKETS

Flour, rice and oil are the most readily available commodities in the assessed communities in Nimroz province. Other items, such as meat/poultry/eggs, dairy/milk/cheese and fuel are only sometimes available. Vegetables are mostly unavailable.

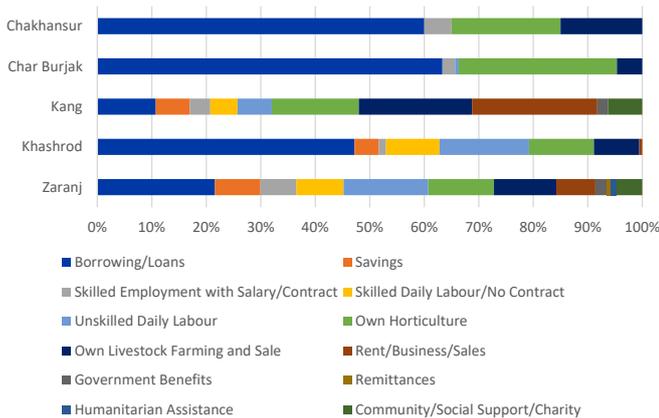

FINANCES & ASSETS

The main source of income for the surveyed settlements in Nimroz is borrowing/loans (27%). Chakhansur (60%), Char Burjak (63%) and Khashrod (47%) are the districts with the highest rates of borrowing. Other main sources of income include unskilled daily labor (14%), agriculture (13%) and livestock rearing (11%) — indicating a mainly rural economy.

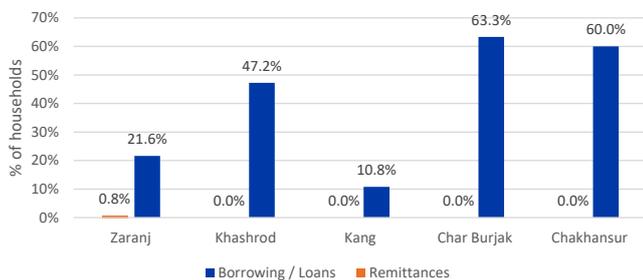

Agriculture is the second highest source of income for Chakhansur and Char Burjak. Kang, Khashrod and Zaranj districts have more diversified economies with income generated through skilled employment, skilled daily labour and businesses.

The average monthly household income and expenditure are highest in Zaranj (AFN 6,286; AFN 9,500) and lowest in Char Burjak (AFN 2,333; AFN 4,333). For all districts, average household expenditure is higher than household income, indicating increasing levels of debt. The highest levels of debt are found in districts Khashrod (AFN 3,778) and Char Burjak (AFN 3,500), the lowest in Kang (AFN 1,250) and Zaranj (AFN 2,531).

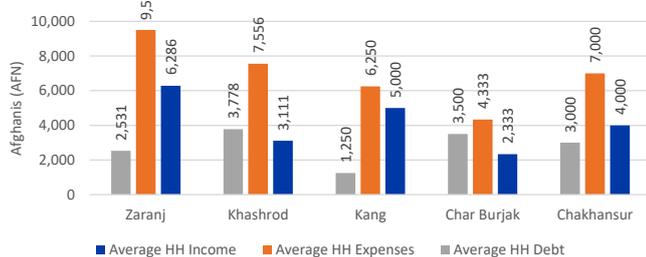

Main income sources | ranked by % of households | Nimroz

Households reliant on loans & remittances by district | Nimroz

Average monthly household income, expenses & debt by district | Nimroz

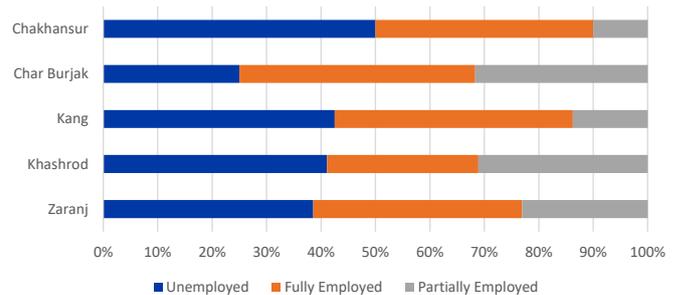

LIVELIHOODS

In Nimroz, the average unemployment rate for males over 18 is 39% — the lowest of all assessed provinces. At the district level, the highest unemployment rate is found in Chakhansur (50%) and the lowest in Char Burjak (25%). The remaining three districts (Kang, Khashrod, and Zaranj) have very similar unemployment rates (39-43%). The average female unemployment in the province is 65%, being the highest in Chakhansur (85%) and Khashrod (83%) districts.

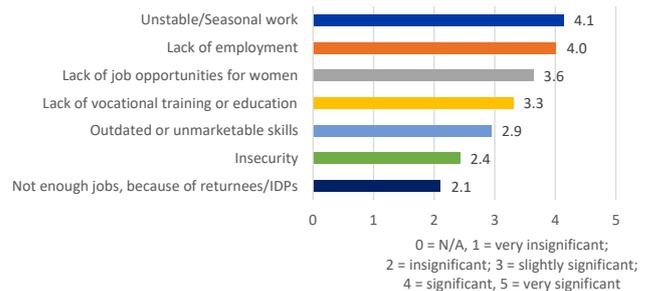

Unstable/seasonal work is the main reported barrier to employment, closely followed by the lack of job opportunities for men and women. Available vocational training includes agricultural, animal husbandry, technology/mobile repairs, tailoring and carpentry training.

In the more agrarian communities of Chakhansur, rates of child labor are high (60%). There are also high rates of female employment in Char Burjak (60%). Elderly employment is highest in Kang (40%) and comparatively lower in all other districts.

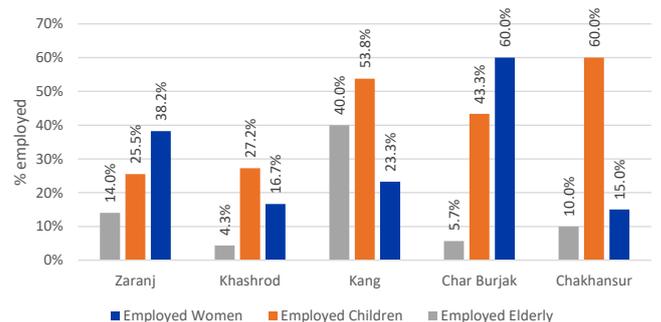

Employment status | men over 18 | Nimroz

Barriers to employment | ranked by significance | Nimroz

Employment participation of women, children & the elderly | Nimroz

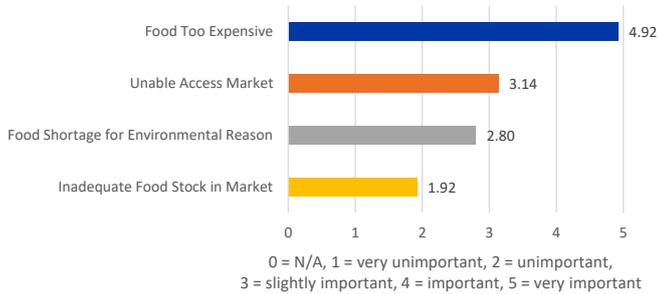

FOOD & NUTRITION

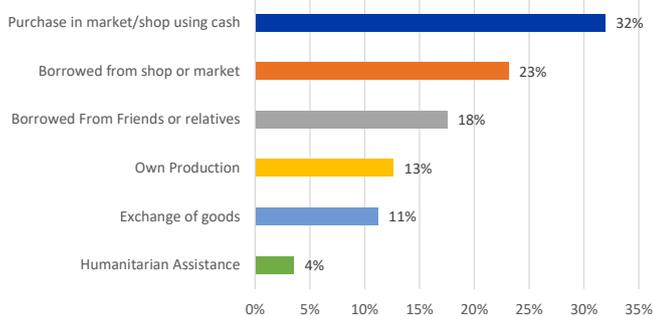

42% of the surveyed communities in Nimroz are unable to meet their basic nutritional needs. The main reason for this figure is the high cost of food. Access to markets and inadequate food stocks were noted as less significant factors.

32% of communities are able to purchase their own food, while 23% of households rely on credit from shops or markets. 18% of households borrow from friends or relatives and 13% rely on their own food production. The lack of water due to drought, access to land and limited trainings for farming are the most significant factors constraining food production.

Food sources | Nimroz

Constraints on local food production | ranked by significance | Nimroz

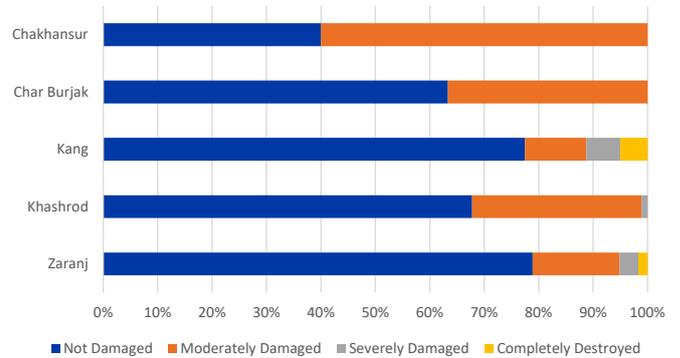

SHELTER

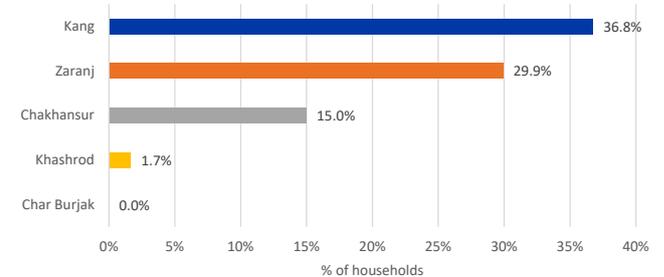

In the assessed settlements in Nimroz, an average of 76% of houses are reportedly undamaged, 19% moderately damaged, 3% severely damaged and 2% are completely destroyed. There are differences between the various districts, in Chakhansur 60% of housing is moderately damaged. Few houses in Kang (5%) and Zaranj (2%) are completely destroyed.

The main reported barrier to housing is high rental prices. During the past six months, 37% of households in Kang were unable to afford rent, in addition to 30% of households in Zaranj. Only 2% of households in Khashrod and none in Char Burjak experienced the same problem.

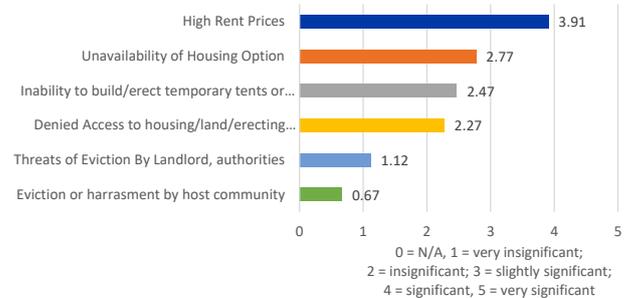

Shelter conditions by level of damage and district | Nimroz

Households unable to afford rent in last 6 months | Nimroz

Barriers to Housing | ranked by significance | Nimroz

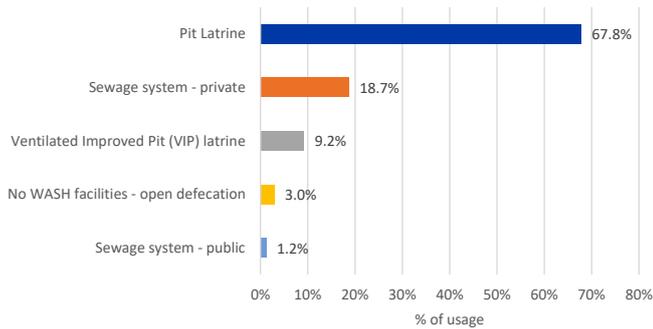

WASH

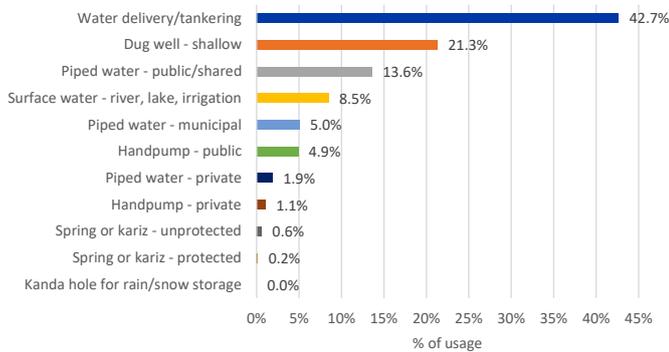

68% of the surveyed population in Nimroz uses pit latrines, 19% uses private sewage systems and 9% uses improved pits. 3% has no access to WASH facilities and practices open defecation — a relatively low figure in comparison to other provinces. 1% of the assessed population has access to public sewage systems.

Available sources of water include water deliveries (43%), shallow dug wells (21%), and shared piped water (14%) and are mostly protected sources of water.

Latrine usage | Nimroz

Drinking water sources | by usage | Nimroz

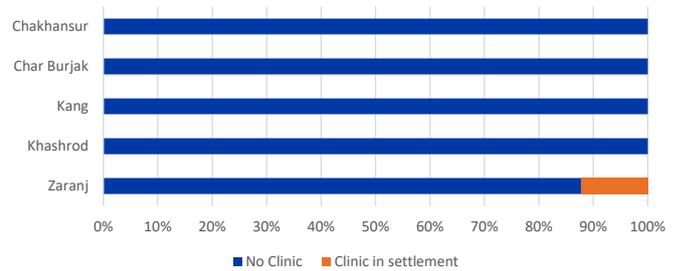

HEALTH

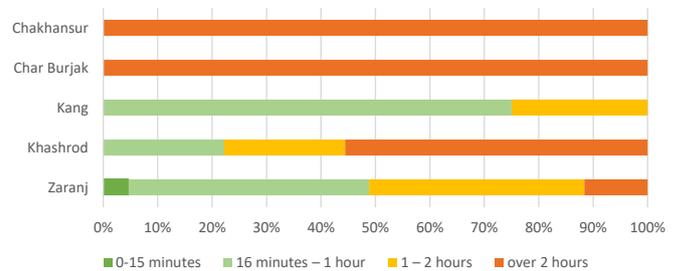

Across the 66 assessed settlements in Nimroz, 91% have no health facility located within their boundaries. Zaranj is the only district to have any health facilities (in districts Khashrod, Kang, Char Burjak, and Chukhansur there are no health facilities in any of the assessed settlements). The quality of medical services is described as either poor (52%) or inadequate (47%).

The main reported health conditions and diseases are dehydration (824 cases), pregnancy complications (738), and drug addiction (659 cases). Zaranj district reported 82% of the total assessed burden of disease in the province. There were 11 noted cases of tuberculosis, 9 are currently under treatment.

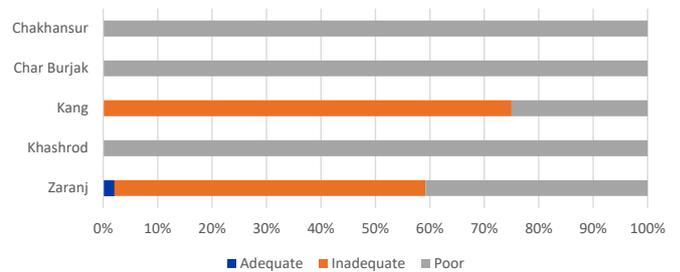

Access to health services | % of settlements with clinics | Nimroz

Access to health services | % of settlements without clinics by walking distance to nearest clinic | Nimroz

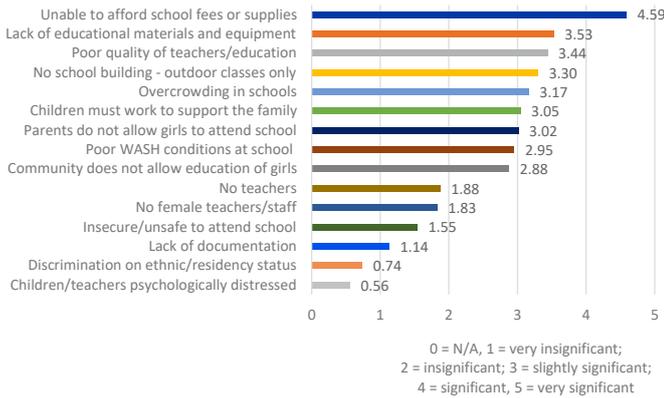

Quality of medical services | by adequacy of medical staff and % of settlements | Nimroz

EDUCATION

The main barrier to education noted by key informants is the high cost of school supplies and school fees, followed by a lack of educational materials and the poor quality of teachers. The lack of facilities, teachers, and overcrowding indicates a need for educational programming to alleviate barriers to education in Nimroz.

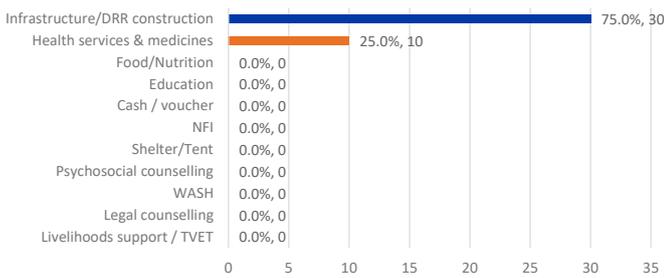

Barriers to education | ranked by significance | Nimroz

ASSISTANCE

Of the recorded humanitarian assistance delivered in Nimroz, 75% was received in the form of infrastructure and disaster risk reduction/construction and 25% for health services. In total, 40 households in the assessed communities received direct assistance.

Assistance received by number of beneficiary families | Nimroz

UTILITIES

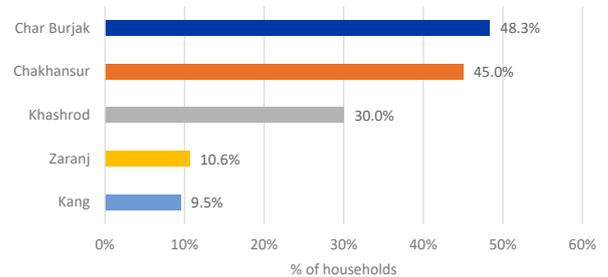

Nimroz reports the shortest electricity outages in comparison to the other provinces, on average for 4 days per month and 2 hours per day. 69% of the assessed populations were able to access government-generated electricity.

In terms of mobile phone connectivity, 23% of assessed households did not receive any signal. The highest connectivity was in Kang (90%) and Zaranj (89%), whereas approximately half of all households in Char Burjak or Charkhansur had no signal. Roshan, Afghan Wireless, and Etisalat are the most common service providers in Nimroz.

Telecom providers by % of household usage | Nimroz

Telecom services | % of households with no signal by district | Nimroz
