

COVID-19 Mobility Tracking Impact – Points of Entry Analysis

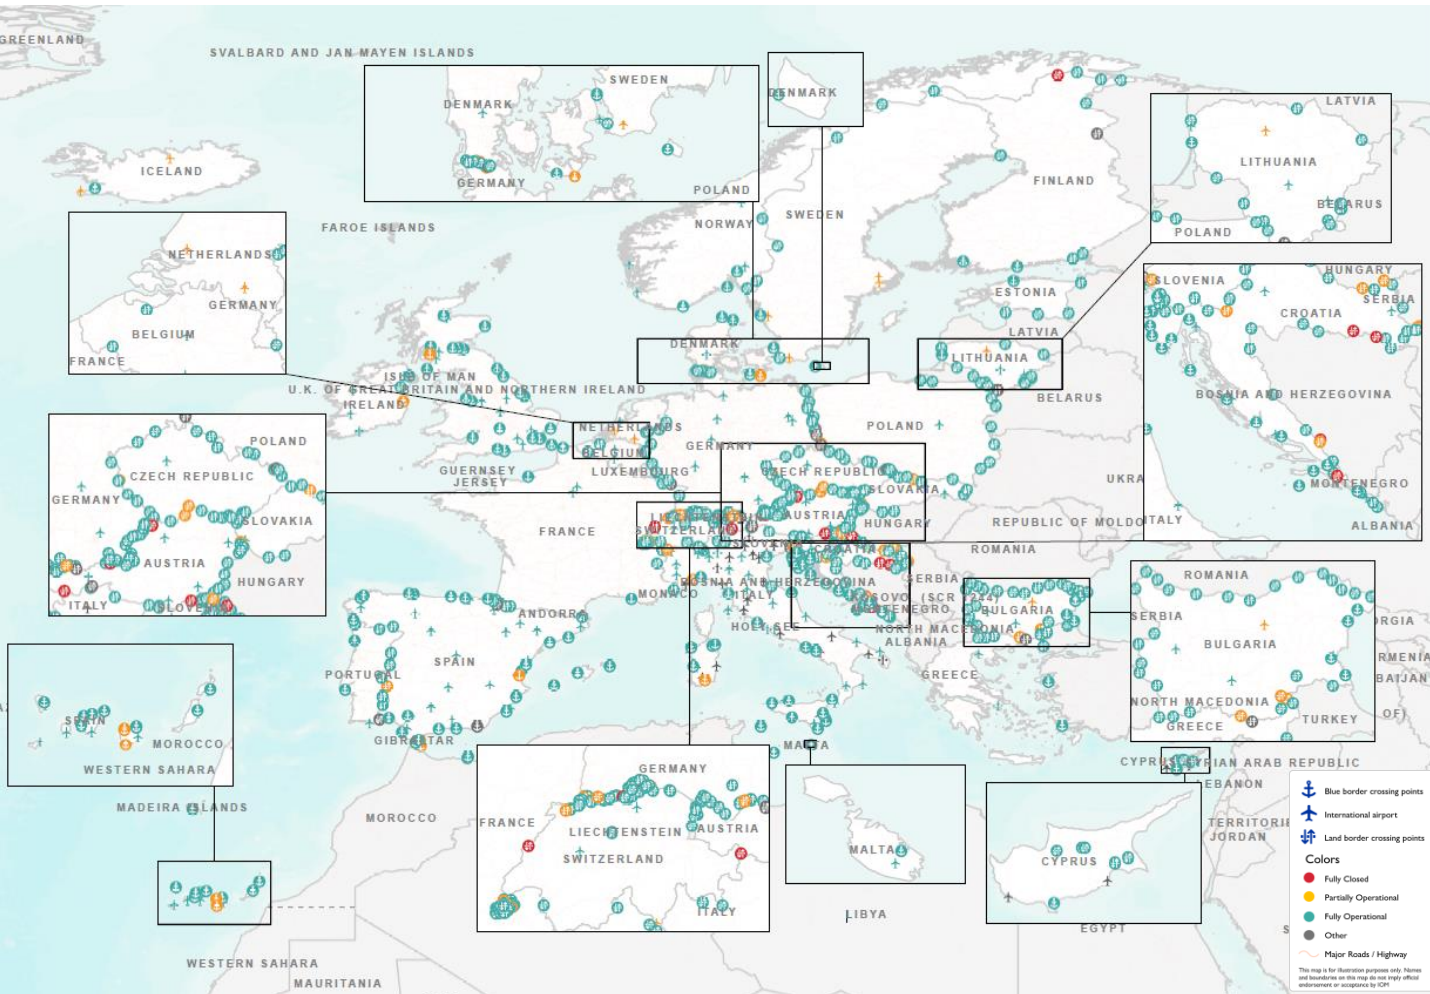

September 24, 2020 – IOM Regional Office for the European Economic Area, the European Union and NATO

A total of 192,776 have succumbed to the Covid-19 disease in the European Economic Area region (EEA) as of 16 October 2020 according to the World Health Organization (WHO). The outbreak of the virus has affected global and regional mobility in the form of various travel disruptions and restrictions. To better understand how the pandemic affects the mobility at the Points of Entry (PoEs), the International Organization for Migration (IOM) has developed an online tool and database which tracks changes in mobility at Points of Entry (airports, land and blue border crossing points). This includes preparedness and response measures to prevent, protect against, control and assist in line with the International Health Regulations (IHR). Among the mobility changes tracked by IOM are: 1) Movement restrictions on entry and/or exit, 2) Changes in visa requirements, 3) Restrictions applied to certain nationalities to disembark at this location, 4) Changes in identification documents needed to disembark, 5) Medical measures in place such as Health Staffing/Medical Personnel, Standard Operating Procedures (SOPs), Risk communication and community engagement (RCCE), Infection prevention and control (IPC) and Surveillance and Referral.

As of 24 September 2020, data was collected on 813 PoEs in 28 countries/territories/areas across the European Economic Area. These locations include: 483 land border crossings points, 193 airports, and 137 blue border crossing points (including sea, river and lake ports). This work is based on the information collected by IOM Country offices in the region. This PoEs brief analysis provides an overview of the changes of impact on operational status and mobility restrictions over time, between April and September 2020. It is important to note that not all data on PoEs have been updated every month meaning that the trend displayed does not necessarily represent the current situation of all PoEs. Furthermore, in April 764 PoEs were assessed, in May 786, in June 787, in July 795, in August 808, and in September a total of 813 PoEs were assessed.

Overview of assessed international airports, land border crossing points and blue border crossing points in the EEA region

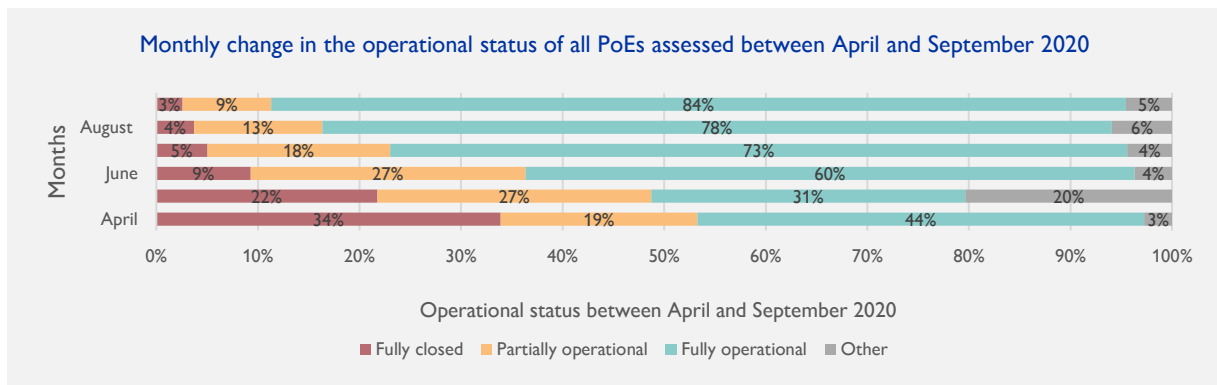

Changes in operational status over time (April – September 2020)

As of 24 September 2020, while travel restrictions remain in place, there has been changes in the number of travel restrictions worldwide being reflected in the operational status of the PoEs and restriction measures in place at the assessed locations. The following information on PoEs such as their operational status is collected according to the following classification: (1) closed for entry and exit, (2) closed for entry (3) closed for exit (4) open for commercial traffic only (5) open only to returning nationals and residents (6) open for entry and exit (7) other and (8) unknown. All types of measures were considered for airports, land and blue border crossing points.

In the region, the operational status of border crossing points is characterized by the implementation of several restriction measures to curb the spread of COVID-19. Significant changes in operational status of the PoEs was observed between April and September.

Overall, one third (34%) of assessed PoE were fully closed in April, while 22 per cent of them were fully closed in May, only 9 per cent in June, 5 per cent in July, 4 per cent in August, and 3 per cent in September. Furthermore, 19 per cent of the assessed PoEs were partially operational in April, while the share of partially operational PoEs was 27 per cent in May and June, respectively, 18 per cent in July, 13 per cent in August, and 9 per cent in September. Finally, in April, 44 per cent of the assessed PoEs were fully operational, while the share of fully operational PoEs among those assessed was 31 per cent in May, 60 per cent in June, 73 per cent in July, 78 per cent in August and 84 per cent in September. This is an increase of 40 per cent of fully operational PoEs in September, when compared with April.

Airports:¹ A total of 21 per cent of the assessed international airports were fully closed in April, while the share of fully closed airports among those assessed was 7 per cent in May, 6 per cent in June and July, respectively, and only 1 per cent in August and September, respectively. Furthermore, 21 per cent of assessed airports were partially operational in April, while the share of partially operational airports among those assessed was 23 per cent in May, 37 per cent in June, 9 per cent in July, 8 per cent in August, and 7 per cent in September. Increasing numbers of airports operating regularly was observed between April and September. Over half (55%) of the assessed airports were fully operational in April, while the share of fully operational airports among those assessed was 25 per cent in May, 52 per cent in June, 80 per cent in July, 76 per cent in August, and 81 per cent in September. The number of operational airports increased by 26 per cent between April and September. Throughout the six-month period (April – September), the largest share of airports being fully operational were recorded in September (81%). The increased number can be explained by the extensive numbers of additional airports that had been assessed in August and September (193 airports assessed, respectively), when comparing with April (150 airports assessed).

Land border crossing points:² Regarding assessed land border crossing points, 35 per cent of them were completely closed in April, while the share of fully closed land border crossing points among those assessed was 28 per cent in May, 11 per cent in June, 5 per cent in July and August, respectively, and 4 per cent in September. Moreover, 17 per cent of the assessed land border crossing points were partially operational in April, while the share of partially operational land border crossing points among those assessed was 33 per cent in May, 21 per cent in June, 23 per cent in July, 17 per cent in August, and 10 per cent in September. Almost half (44%) of the assessed land border crossing points were fully operational in April, while the share of fully operational land border crossing points was 32 per cent in May, 67 per cent in June, 69 per cent in July, 76 per cent in August, and 83 per cent in September. The number of operational land border crossing points increased by more than one third (39%) between April and September 2020.

Blue border crossing points:³ Less than half (45%) of the blue border crossing points were completely closed in April, while the share of fully closed blue border crossing points among those assessed was 17 per cent in May, 11 per cent in June, only 4 per cent in July and August, respectively, where none of the assessed blue border crossing points were reportedly closed in September. At the same time, 24 per cent of the assessed blue border crossing points were partially operational in April, while the share of partially operational blue border crossing points among those assessed was 13 per cent in May, 21 per cent in June, 14 per cent in July, 5 per cent in August, and 7 per cent in September. Thirty per cent of the assessed blue border crossing points were reported as being operational in April, while the share of fully operational blue border crossing points was 33 per cent in May, 67 per cent in June, 76 per cent in July, 88 per cent in August, and 92 per cent in September. The number of operational blue border crossing points increased by 62 per cent between April and September (see page 3, for further information).

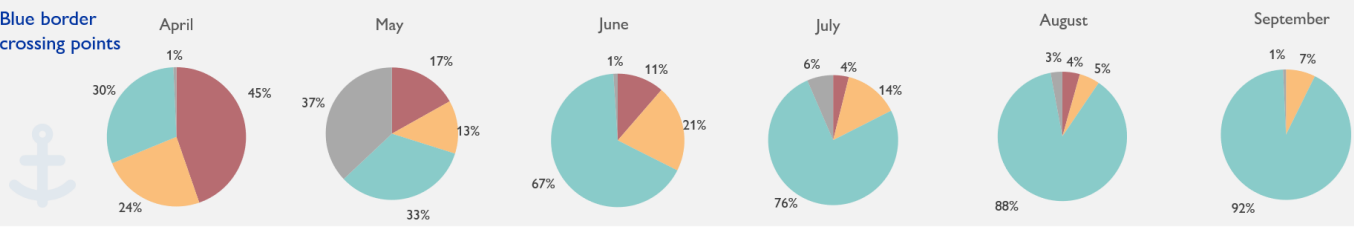

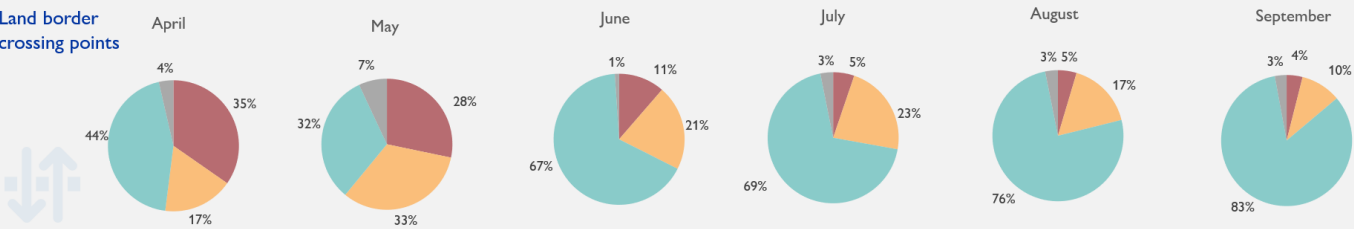

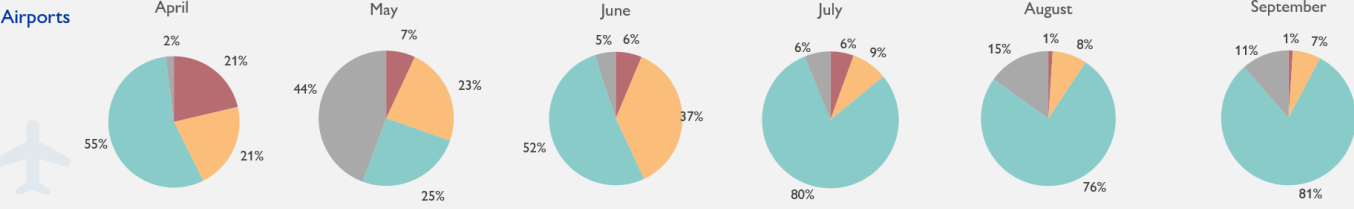

1. 150 airports were assessed in April. The number of assessed airports increased from 150 to 193 by August 2020. Number of assessed airports remains the same in September 2020 (193).

2. 453 land border crossing points were assessed April. The number of assessed land border crossing points increased from 453 to 483 by September 2020.

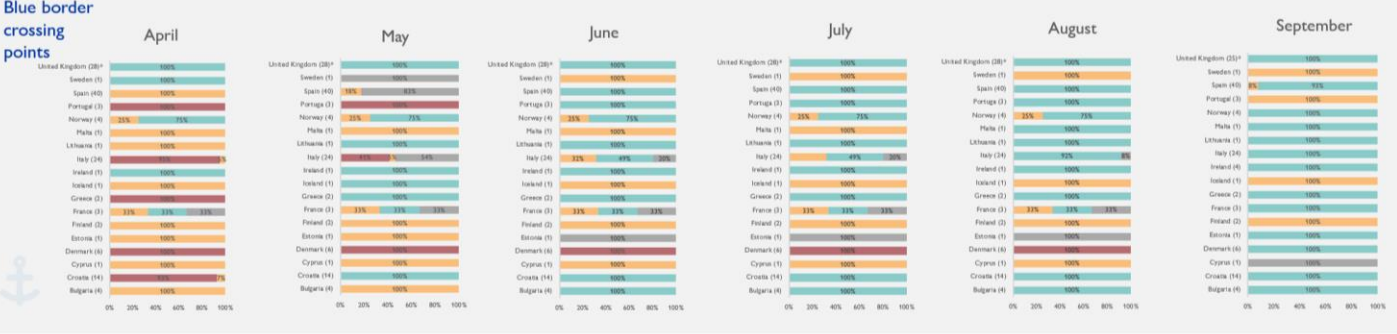

3. 141 blue border crossing points were assessed in April. The number of assessed blue border crossing points decreased from 141 to 137 by August 2020. Number of assessed blue border crossing points remains the same in September 2020 (137).

Operational Status – Comparison: April – September 2020

■ Fully Closed ■ Partially Operational
■ Fully Operational ■ Other

Changes in mobility restrictions over time (April – September 2020)

Various changes in mobility restrictions of the border crossing points was observed between April and August. Mobility restrictions refer to restrictions of movements imposed both by entrance at PoEs and by exit through the PoEs, and medical measures.

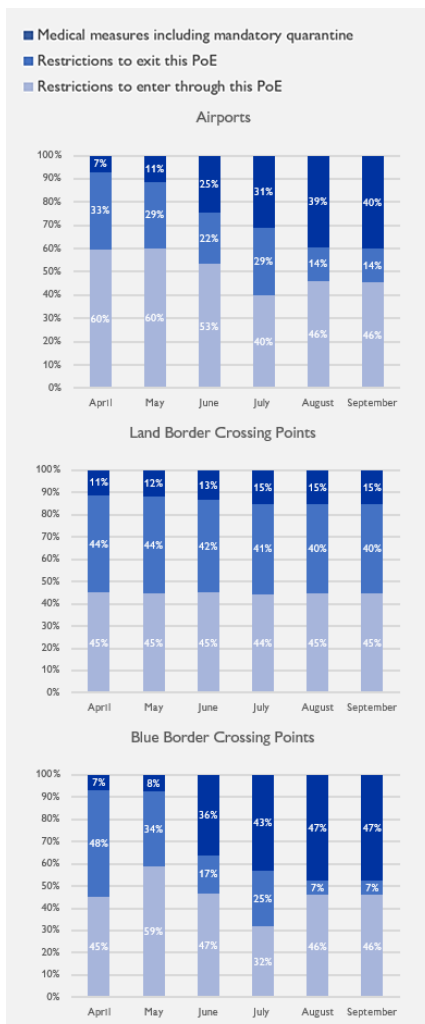

In April and May, 60 per cent of the restrictions were imposed on entering through particular PoEs at international airports, while in June 53 per cent, in July 40 per cent, in August and September 46 per cent, respectively. At the same time, in April 33 per cent of the restrictions were imposed on exiting through particular PoEs at international airports, while in May 29 per cent, in June 22 per cent, in July 29 per cent, and in August and September 14 per cent, respectively. The number of medical measures including mandatory quarantine restrictive measures increased significantly by September when comparing with April: In April, 7 per cent of the restrictions were medical measures imposed on the particular PoEs, while in May 11 per cent, in June 25 per cent, in July 31 per cent, in August 39 per cent, and in September 40 per cent.

Regarding the land border crossing points, restrictions imposed on entering through particular PoEs remained relatively stable between April and August. In April, May, June, August and September, 45 per cent of the restrictions were imposed on entering through this type of PoEs, respectively, while in July, 44 per cent. Furthermore, in April and May, 44 per cent of the restrictions were imposed on exiting through particular PoEs, respectively, while in June 42 per cent, in July 41 per cent, and in August and September 40 per cent, respectively. The number of medical measures increased only slightly by July, August and September when compared with April – June: In April, 11 per cent of the restrictions were medical measures imposed on the particular PoEs, while in May 12 per cent, in June 13 per cent, and in July, August and September 15 per cent, respectively.

With regards to the blue border crossing points, in April, 45 per cent of the restrictions were imposed on entering through particular PoEs, while in May 59 per cent, in June 47 per cent, in July 32 per cent, and in August and September 46 per cent, respectively. Moreover, in April 48 per cent of the restrictions were imposed on exiting through particular PoEs, while in May 34 per cent, in June 17 per cent, and in August and September 7 per cent, respectively. Significant increases of imposed medical measures were observed in June, July, August and September when compared with April and May: In April, 7 per cent of the restrictions were medical measures imposed on particular PoEs, while in May 8 per cent, in June 36 per cent, in July 43 per cent, and in August and September 47 per cent, respectively.

Overall, majority of imposed restrictions concern the entry through the PoEs (airports, land and blue border crossing points in the EEA region), and to a lesser extent exit through or medical restrictions imposed at those PoEs. Here, the highest number of restrictions were recorded in April and May: 60 per cent at the assessed airports, 59 per cent at the blue border crossing points recorded in May, and 45 per cent at the assessed blue border crossing points recorded in April, May, June, August and September, while the lowest number of restrictions to enter through the PoEs were recorded in July: 40 per cent at the assessed airports, 44 per cent at the assessed land border crossing points, and 32 per cent at the assessed blue border crossing points.

Percentage: Mobility Restrictions – Comparison: April – September 2020

Mobility Restrictions – Comparison: April – September 2020

Location type	Mobility Restriction	April	May	June	July	August	September
Airports	Restrictions to enter through this PoE	60%	60%	53%	40%	46%	46%
	Restrictions to exit through this PoE	33%	29%	22%	29%	14%	24%
