OVERVIEW

Since the beginning of March 2019, Malawi has experienced floods and sustained heavy rains caused by the tropical cyclone Idai weather system. From 1 — 6 April 2019 IOM, in close coordination with the Government of Malawi through the Department of Disaster Management Affairs (DoDMA), conducted DTM Round II multi-sectoral location assessments in 103 displacement sites in Chikwawa, Nsanje, Phalombe, Zomba districts.
DEMOGRAPHICS

During the reporting period 110,110 individuals (24,887 households) were recorded across 103 displacement sites. An additional 40 sites in the 4 districts were assessed and verified in this data collection round.

The total displaced population is composed of 58% females and 42% males. Observing Figure 1, subdivided by age and sex, largest cohort is 18-59 years (27% female and 18% male), followed by 6-12 years (9% female, 7% male), and 13-17 years (9% female, 7% male). Children under 18 make up to 50% of the IDP population and 18% of them are under five years old (the average household size is 4.4).

In 32 sites the majority of IDPs indicated that they are displaced from Chikwawa district. In 27 sites the majority of IDPs were from Nsanje. In 20 sites most IDPs are from Phalombe, while in the remaining 24 sites most IDPs are from Zomba. All the sites had a majority of IDPs from the same district as they were located (e.g. all the site in Chikwawa have a majority of IDPs from Chikwawa).

An estimated 126 Mozambican households (349 individuals in total) were identified in one site in Nsanje district.

SITE INFORMATION

All the displacement sites that were assessed are classified as collective centres. 53 of the displacement sites are schools, 16 are community centres, with the remaining 34 being classified as other. 38 sites reported having a site management agency, and the remaining 65 reported no agency. All the sites are reported to be accessible.

RETURN INTENTIONS

In 52 of the 103 sites the majority of IDPs expected to be displaced between 1 and 3 months, while in 46 sites, IDPs expected to be displaced for more than 3 months. Five (5) sites expect their overall displacement to be one month or shorter.

In 74 of 103 sites it was reported that damaged/destroyed housing is the primary reason preventing people from returning to their area of origin. The remaining reasons reported are basic infrastructure damage (25), and lack of food (4).

In 32 sites the majority of IDPs indicated that they are displaced from Chikwawa district. In 27 sites the majority of IDPs were from Nsanje. In 20 sites most IDPs are from Phalombe, while in the remaining 24 sites most IDPs are from Zomba. All the sites had a majority of IDPs from the same district as they were located (e.g. all the site in Chikwawa have a majority of IDPs from Chikwawa).
NEEDS OVERVIEW

As seen in Figure 4, the primary need reported in 76 sites is food. Eight sites reported shelter as their main priority. The remaining sites listed cooking sets (4) and sleeping items (1).

Figure 4 — Primary needs in displacement sites

As seen in Figure 5, the top three most reported secondary needs are: shelter in 32 sites, cooking sets in 28 sites, and in another 19 sites the need is related to sleeping items (e.g. blankets).

Figure 5 — Secondary needs in displacement sites

SHELTER

As seen in figure 6, it was reported that in 2 sites, all individuals are sleeping outdoors, while in 15 sites, 75% of individuals are sleeping outdoors. In a further 17 sites, 50% of the population is sleeping outdoors.

Figure 6 — Proportion of individuals sleeping outdoors in displacement sites

WATER, SANITATION, AND HYGIENE (WASH)

As seen in Figure 7, in 76 sites out of the 103, the main source of drinking water is a tube well or a borehole. In 6 sites, IDPs access water from unprotected wells. In 4 sites, the main point of water access is a public tap or standpipe. A further 5 sites received piped water from either neighbours, dwellings, or from a supply on their plot.

Figure 7 — Access to drinking water in displacement sites

In 45 sites, all individuals have enough water to drink while in 28 sites, 75% of the population has enough water to drink. In 15 sites, 50% of the population does not have enough water. In 14 sites only 25% of inhabitants have enough water to drink. In 1 site no one has access to drinking water. These last two categories represent a camp population of 17,667.

Figure 8 — Proportion of individuals with adequate access to drinking water in displacement sites
In 24 sites, no one has access to bathing or shower facilities while in 38 sites, only 25% of individuals have access to shower facilities.

In 56 sites, the most common type of sanitation facilities are pit latrines with a slab, while in 45 sites, pit latrines without a slab are predominant. The remaining 2 sites have no sanitation facilities.

The lack of sanitation in some of the displacement sites is includes a lack of soap, as shown in Figure 9. In 52 sites nobody has access to soap, and in 42 sites only 25% of the IDPs have access. In 4 sites around half of the individuals do not have access to soap, while in 2 sites most IDPs have access. Only in 3 displacement sites does everyone have access to soap.

Figure 9 — Proportion of IDPs who have access to soap in displacement sites

FOOD AND NUTRITION

As shown in Figure 10 in the next column, in 21 sites, all households have less than 3 meals per day. In 20 sites, 75% of the households are in a similar situation. In a further 14 sites, half of the IDP households have less than 3 meals per day. In 15 sites 50% of the households have fewer than three meals a day. In 36 sites, only 25% of the households are having fewer than three meals a day, and in only 11 sites it was reported that households are consumed three meals a day.

Figure 10 — Proportion of households in sites who had fewer than three meals a day

HEALTH

In 76 out of the 103 sites, individuals reported that the health facility is more than 30 minutes walking distance from the site. In 24 sites, the health facilities are reported to be up to 30 minutes walking distance from the site, while in 3 sites there are no reachable health facilities.

In 14 sites, lack of funds is preventing most IDPs from accessing health care services while in 21 sites there is no medicine available in health centres.

EDUCATION

In 41 sites, none children aged between 3 to 5 years are attending school, while in 14 sites, 75% of children in the same age group are also not attending.

In 4 sites, none of the children from 6 to 12 are attending school while in 5 of them, 75% of children do not attend school.

In 8 sites, none of the children from 13 to 17 are attending school and in 10 sites, 75% of children are in the same situation.

PROTECTION

In 71 sites there is no adequate lighting in any of the common spaces. In 23 sites only 25% of communal areas have lighting coverage. It was reported that in 88 sites, there is no lighting around their sanitation facilities.

In 13 sites, none of the latrines are separated by sex while in 54 sites there are no sex-segregated bathing facilities.

In 80 sites out of the 103, there is no safety mechanism or lock on the latrines. In 94 sites there are no locks on the inside doors of bathing facilities.

In 10 out of 103 sites, it was reported that there is no security provided in the site.
SEVERITY SCALE:
Composite WASH severity is measured as the geometric mean of three severity measures:

a) Water Access severity is measured using the number of IDPs with access to drinking water and the ones that have access to water for domestic use (i.e. for laundry, cooking, etc.);

b) Hygiene Access severity is measured using the number of IDPs with access to functioning bathing/shower facilities and IDPs that have enough soap;

c) Sanitation severity is based on the percentages of people living in areas where open defecation and/or dumped garbage is frequently visible.

For more detailed information about the methodology, please see technical document [here](#).
